This book contributes to making urban rail transport fast punctual and energy efficient significant factors in the importance of public transportation systems to economic environmental and social requirements at both municipal and national levels It proposes new methods for shortening passenger travel times and for reducing energy consumption addressing two major topics 1 train trajectory planning the authors derive a nonlinear model for the operation of trains and present several approaches for calculating optimal and energy efficient trajectories within a given schedule and 2 train scheduling the authors develop a train scheduling model for urban rail systems and optimization approaches with which to balance total passenger travel time with energy efficiency and other costs to the operator Mixed integer linear programming and pseudospectral methods are among the new methods proposed for single and multi train systems for the solution of the nonlinear trajectory planning problem which involves constraints such as varying speed restrictions and maximum traction braking force Signaling systems and their effects are also accounted for in the trajectory planning model Origin destination passenger demand is included in the model formulation for train scheduling Iterative convex programming and efficient bi level approaches are utilized in the solution of the train scheduling problem In addition the splitting rates and route choices of passengers are also optimized from the system point of view The problems and solutions described in Optimal Trajectory Planning and Train Scheduling for Urban Rail Transit Systems will interest researchers studying public transport systems and logistics whether from an academic or practitioner background as well as providing a real application for anybody studying optimization theory and predictive control

**The Manual of American Water Works**, 1897    **Car and Driver**, 2003-07    **Machine Design**, 2002    Forthcoming Books Rose Arny, 2003

Manual of American Water-works, 1897 Moses Nelson Baker, 1897    New Research in Crime Modeling and Mapping

Using Geospatial Technologies Michael Leitner, 2025-03-10 This edited volume offers innovative research and applications in the analysis, modelling and mapping of crime using geospatial and GeoAI technologies. This is a follow up publication of an edited volume by the same editor with a similar title *Crime Modeling and Mapping Using Geospatial Technologies* published by Springer in its popular *Geotechnologies and the Environment* series in 2013. The book comprises sixteen chapters authored by some of the most esteemed researchers in the field. These chapters are organized into four sections: big data and microspaces, Part I mobility; Part II drugs; Part III additional geospatial applications; Part IV. Part I includes five chapters focusing on interactive crime mapping by using large data sets obtained from social media and analyzing these data using AI applications; a fundamental spatial problem that considers spatial properties of a crime dataset to determine an adequate areal unit size; different aspects of the influence or prediction of crime in microspaces; and the use of sampled surface pollen to model the search space for documented forensic cases. Part II has four chapters that introduce two route generation heuristics that automate the creation of hot spots; policing patrol routes; discuss how to optimize police response with two different maximal covering location problems; and examine how human mobility patterns impact crime trends and modelling. Part III consists of three chapters addressing opioid overdose patterns using a spatial mixed methods approach; spatial temporal changes in hot spots of drug related offences; and how geospatial technology can be used to empower stakeholders to make informed policy decisions about alcohol related motor vehicle collisions. Part IV comprises four diverse chapters that do not fit under a single theme. The topics discussed include the impact of video surveillance on the spatial distribution of crime; the identification of the location of missing persons; outreach events with spatial clustering analysis methods; an examination of the distribution patterns of all types of juvenile delinquency to investigate underlying factors; and a review and comparison of GeoAI methods for detecting and mapping illegal logging. This book would be useful to faculty, students, and research scholars from geography, sociology, criminal justice, criminology, forensic sciences, and other related disciplines, as well as to crime analysts working for law enforcement agencies at the local, state, or federal levels from around the world.
