How many valence electrons are in an atom of chlorine? - answer ✓✓✓7

How many valence electrons does aluminum have? - answer ✓✓✓3

Define Reaction Rate - answer ✓✓ The decrease in concentration of reactants or the increase in concentration of products with time.

How does increasing temperature affect the rate of reaction? - answer ✓✓ Increasing temperature causes the kinetic energy to increase. Thus, molecules are moving faster and colliding more frequently. This causes the rate of reaction to increase.

If I decrease the concentration of reactant, what happens to the rate of reaction? - answer ✓✓ Decreasing concentration leads to less reactants available for collision. Therefore, reaction rate decreases.

How does surface area influence reaction rate? - answer ✓✓ By increasing the surface area of reactant molecules, we are increasing the space or point of contact that these molecules have available to interact. This causes an increase in the rate of reaction.

How does a catalyst speed up a chemical reaction? - answer ✓✓ A catalyst speeds up a chemical reaction by finding an alternate pathway with a lower activation energy.

Define activation energy. - answer ✓✓ The energy required to start a chemical reaction.

Define equilibrium. - answer ✓✓ Equilibrium is established when the rate of the forward reaction is equal to the rate of the reverse reaction.

Is energy absorbed or released in an endothermic reaction? - answer ✓✓ Absorbed.

What is the sign of delta H for an exothermic reaction? - answer ✓✓ Exothermic reactions release energy. The sign of delta H is negative.

When you touch a flask and it feels hot, is this an endothermic or exothermic process? - answer ✓✓ Exothermic; heat is being given off.

Define specific heat capacity. - answer ✓✓ The amount of heat required to raise 1g of a substance to 1 degrees Celsius.

March, 2004-04 *Creating Wicked Students* Paul Hanstedt, 2023-07-03 In *Creating Wicked Students*, Paul Hanstedt argues that courses can and should be designed to present students with what are known as wicked problems because the skills of dealing with such knotty problems are what will best prepare them for life after college. As the author puts it, this book begins with the assumption that what we all want for our students is that they be capable of changing the world. When a student leaves college, we want them to enter the world not as drones participating mindlessly in activities to which they've been appointed, but as thinking, deliberative beings who add something to society. There's a lot of talk in education these days about wicked problems: problems that defy traditional expectations or knowledge problems that evolve over time. Zika ISIS

political discourse in the era of social media To prepare students for such wicked problems they need to have wicked competencies the ability to respond easily and on the fly to complex challenges Unfortunately a traditional education that focuses on content and skills often fails to achieve this sense of wickedness Students memorize for the test prepare for the paper practice the various algorithms over and over again but when the parameters or dynamics of the test or the paper or the equation change students are often at a loss for how to adjust This is a course design book centered on the idea that the goal in the college classroom in all classrooms all the time is to develop students who are not just loaded with content but capable of using that content in thoughtful deliberate ways to make the world a better place Achieving this goal requires a top to bottom reconsideration of courses including student learning goals text selection and course structure day to day pedagogies and assignment and project design Creating Wicked Students takes readers through each step of the process providing multiple examples at each stage while always encouraging instructors to consider concepts and exercises in light of their own courses and students College Chemistry Harold Goldwhite,John R. Spielman,1984 An outline of the basic concepts of chemistry includes discussions of scientific notation atomic structure chemical bonding and the periodic table
