Traditionally, it involves harvesting rainwater from a roof. The rain will fall on gutters and then into a tank or barrel. Rainwater harvesting is a sustainable way to conserve water and reduce dependence on municipal water supplies. It can be used for various purposes such as irrigation, toilet flushing, and laundry. Rainwater harvesting systems can be simple or complex, depending on the needs of the user. Some systems may require a pump to move the water from the tank to the point of use, while others may use gravity to move the water. Rainwater harvesting is an effective way to reduce water bills and help protect the environment.
