Speed vs. Velocity

Speed and velocity are two quantities in Physics which seem at first glance to have the same meaning. While related, they have distinctly different definitions. Knowing their definitions is critical to understanding the difference between them.

Speed is a quantity which describes how fast or how slow an object is moving.

Velocity is a quantity which is defined as the rate at which an object's position changes.

3. Suppose you are considering three different paths (A, B and C) between the same two locations.

Along which path would you have to move with the greatest speed to arrive at the destination in the same amount of time? Explain.

4. True or False: It is possible for an object to move for 10 seconds at a high speed and end up with no overall change in position.

a. True b. False
5. If the above statement is true, then describe an example of such a motion. If the above statement is false, then explain why it is false.

6. Suppose that you run for 10 seconds along three different paths.

Rank the three paths from the lowest speed to the greatest speed. _____

Rank the three paths from the lowest velocity to the greatest velocity : _____
