Advances in Robot Kinematics Jadran Lenarčič, Federico Thomas, 2013-06-29 This is the fifth book of the Kluwer series Advances in Robot Kinematics The book presents the most recent research advances in the theory design control and application of robotic systems which are intended for a variety of purposes such as manipulation manufacturing automation surgery locomotion and biomechanics The issues addressed are fundamentally kinematic in nature including synthesis calibration redundancy force control dexterity inverse and forward kinematics kinematic singularities as well as over constrained systems Methods used include line geometry quaternion algebra screw algebra and linear algebra These methods are applied to both parallel and serial multi degree of freedom systems The results should interest researchers teachers and students in fields of engineering and mathematics related to robot theory design control and application Each contribution in this book had been rigorously reviewed by two or three independent reviewers and 53 articles had been recommended for publication We are happy to observe that Advances in Robot Kinematics has always attracted the most outstanding authors and has developed a remarkable scientific community in the area Many important and original scientific results were for the first time reported and discussed in these books All articles in this book were also reported at the eight international symposium on Advances in Robot Kinematics that was organised in June 2002 in Caldes de Malavella in Spain

Geometric Graphs and Arrangements Stefan Felsner, 2012-12-06 Among the intuitively appealing aspects of graph theory is its close connection to drawings and geometry The development of computer technology has become a source of motivation to reconsider these connections in particular geometric graphs are emerging as a new subfield of graph theory Arrangements of points and lines are the objects for many challenging problems and surprising solutions in combinatorial geometry The book is a collection of beautiful and mostly very recent results from the intersection of geometry graph theory and combinatorics *Annual Report of the Executive Directors for the Fiscal Year* International Monetary Fund, 1999 **A**
