Hodges, 2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well

tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching *Teaching High School Science Through Inquiry and Argumentation* Douglas Llewellyn,2012-11-28 Proven ways to teach next generation science The numbers are in and the pressure is on The U S s lead in science is very much at risk If we re to help ensure our students achieve scientific literacy we need to take a critical look at what s working and what isn t One thing we know for certain inquiry and argumentation are key and the single best resource on the subject is *Teaching High School Science Through Inquiry and Argumentation* Devoted to Grades 9 12 this new edition of Douglas Llewellyn s ground breaking text aligns the four key elements of effective science education scientific literacy inquiry argumentation and the nature of science Fully revised the second edition features Content that addresses the new direction of science standards Exceptional coverage of scientific argumentation Enhanced chapters on assessment and classroom management Questioning techniques that promote the most learning Activities that emphasize making claims and citing evidence New examples of inquiry investigations New approaches to traditional labs Case studies and vignettes that model exemplary science instruction With its standards based content there s no better resource to help you elevate your teaching to meet the call for instructional reform Douglas Llewellyn teaches science education courses at St John Fisher College in Rochester New York Previously he was the K 12 Director of Science at the Rochester City School District a junior high school principal and a middle school science teacher His books include *Inquire Within Implementing Inquiry Based Science Standards in Grades 3 8* and *Differentiated Science Inquiry* both published by Corwin Llewellyn s approach supports educators in realizing the central role argumentation plays in helping students make defensible connection between claims data evidence and explanations Not only is this a timely publication but one that is sure to be well used Page Keeley Past President National Science Teachers Association Author of *Science Formative Assessment*
