

ENZYME WORKSHEETS

Fill in the gaps in the following sentences using the words in the box below.

1. Enzymes are biological catalysts that speed up chemical reactions in living organisms.
2. Enzymes are protein molecules, which are made up of long chains of amino acids.
3. The sequence and type of amino acids are different in each protein, so they produce enzymes with many different shapes and functions.
4. The shape of an enzyme is very important to its function.

different catalysts function the same amino acids

Label the image below with the following terms: active site, substrate, enzyme.

5. Enzymes and their substrates are often compared to a lock and key. This is called the Lock and Key Model. Label the lock and key in the image above.
6. Explain what would happen if a substrate molecule with a different shape to the enzyme came into contact with the enzyme's active site.

In case of lock and key model of enzyme-catalyzed reactions, active site is a rigid site. A different shape of a substrate would not be entertained, hence there will be no reaction

Answer Key To Enzyme Activity:

Cell Chemistry and Physiology: Part I Edward Bittar, 1996-01-04 This is the first of a 4 volume module that is an introduction to the study of cell chemistry and physiology. It is not intended to be encyclopedic in nature but rather a general survey of the subject with an emphasis on those topics that are central to an understanding of cell biology and those that are certain to become of increasing importance in the teaching of modern medicine. We have followed what appeared to us to be the logical divisions of the subject beginning with proteins. Allewell and her colleagues stress the point that proteins fold spontaneously to form complex three dimensional structures and that some of them unfold with the help of proteins called chaperones. Michaelis-Menten kinetics are shown by Nelsetuen to describe the behaviour of enzymes in the test tube. The formalism is particularly useful in the search for agents of therapeutic value as exemplified by methotrexate. Uptake by mammalian cells of substrates and their metabolic conversions are discussed by van der Vusse and Reneman. However both Welch and Savageau expound the view that the cell is not simply a bagful of enzymes. The biologist is urged by Savageau to abandon Michaelis-Menten formalism and apply the Power Law. The biologist is also told that the approach to arriving at a theory of metabolic control would have to be one of successive approximations requiring the use of the computer. Information gained from comparative biochemistry is shown by Storey and Brooks to have shed new light on mechanisms of metabolic rate depression and freeze tolerance and to be applicable to organ transplantation technology. We are reminded that enzyme adaptation is partly the result of the presence of a hydrating shell of vicinal water that stabilises conformation of the enzyme. Vicinal water according to Drost-Hausen and Singleton lies adjacent to most solids and protein interfaces. The kinks or breaks observed in the slope of the Arrhenius plot are attributed to structural changes in vicinal water. Regulation of cell volume is shown by Hempling to involve regulation of cell water. It could be that the osmo receptor or volume detection system is a protein that links the cytoskeleton to specific K and Cl channels. Additionally it is interesting that aquaporins which are water channel forming membrane proteins are now known to exist in both renal and extra renal tissues. One of the renal porins is affected by vasopressin. We then pass on to protein synthesis Rattan and other important topics including protein glycosylation Hounsell methylation Clarke ADP ribosylation Pearson and prenylation Gelb. Among the four types of lipids attached to membrane proteins are the prenyl groups Ford and Gross in their chapter on lipobiology drive home the point that there is an accumulation of acyl carnitine and lysophospholipids during myocardial infarction.

[CBSE Chemistry Important Questions Chapter wise Class 12](#) Priti Singhal, 2024-11-13 PREFACE The field of chemistry is ever evolving playing a pivotal role in our understanding of the natural world and the development of new technologies. This Class 12 Chemistry textbook is designed to provide students with a comprehensive and in-depth understanding of various chemical concepts, theories, and applications. This book is structured to align with the latest syllabus and curriculum guidelines, ensuring that the content is both relevant and rigorous. Each chapter begins with a clear set of learning objectives providing a roadmap for

students to understand what they will achieve by the end of the chapter. We have included numerous diagrams, illustrations, and real-life examples to make complex concepts more accessible and engaging. To support the diverse learning needs of students, this textbook includes a variety of pedagogical features: Conceptual Explanations, Detailed explanations of key concepts, designed to build a solid foundation in chemistry; Worked Examples, Step-by-step solutions to problems demonstrating the application of concepts in various contexts; Practice Problems, A wide range of problems at different levels of difficulty to reinforce learning and develop problem-solving skills; Experimental Techniques, Descriptions of essential laboratory techniques and experiments, fostering practical skills and a hands-on approach to learning; Real World Applications, Insights into how chemistry is applied in various industries and research fields, highlighting its relevance and impact on everyday life. We have also incorporated review questions at the end of each chapter to help students consolidate their knowledge and prepare for examinations. This textbook is the result of the collective efforts of experienced educators and subject matter experts. We are confident that it will serve as a valuable resource for students, fostering a deeper appreciation of chemistry and its significance in our world. We encourage students to approach their study of chemistry with curiosity and enthusiasm, as it is a subject that offers endless opportunities for discovery and innovation. We hope this book will inspire the next generation of chemists to contribute to scientific advancements and the betterment of society. **JAM IIT**

Biotechnology Question Bank MSc Entrance Mocktime Publication, This question bank for IIT JAM Biotechnology code BT is tailored for MSc entrance and includes full previous year papers, topic-wise question sets, molecular biology, genetics, cell biology, biochemistry, microbial technology PDF downloads, answer keys, and explanatory solutions. Additionally, books linked to this bank offer concise revision notes aligned to the JAM Biotechnology syllabus, model tests under exam-like time constraints, and analysis of previous paper trends. The IIT JAM exam pattern for Biotechnology follows the standard JAM structure, multiple sections, objective questions, specified marks per section.
