**The Revival of the 2-stroke Engine and Studying Flex Fuel Engines** Jay Meldrum,2017-02-01 This collection is a resource for studying the history of the evolving technologies that have contributed to snowmobiles becoming cleaner and quieter machines Papers address design for a snowmobile using the EPA test procedure and standard for off road vehicles Innovative technology solutions include Engine Design improving the two stroke gas direct injection GDI engine Applications of new muffler designs and a catalytic converter Solving flex fuel design and engine power problems The SAE International Clean Snowmobile Challenge CSC program is an engineering design competition The program provides undergraduate and graduate students the opportunity to enhance their engineering design and project management skills by reengineering a snowmobile to reduce emissions and noise The competition includes internal combustion engine categories that address both gasoline and diesel as well as the zero emissions category in which range and draw bar performance are measured The goal of the competition is designing a cleaner and quieter snowmobile The competitors modified snowmobiles are also expected to be cost effective and comfortable for the operator to drive

**Concepts in Turbocharging for Improved Efficiency and Emissions Reduction** Mehrdad Zangeneh,2014-09-22 Legislative requirements to reduce CO2 emissions by 2020 have

resulted in significant efforts by car manufacturers to explore various methods of pollution abatement One of the most effective ways found so far is by shortening the cylinder stroke and downsizing the engine This new engine then needs to be boosted or turbocharged to create the full and original load torque Turbocharging has been and will continue to be a key component to the new technologies that will make a positive difference in the next generation engines of years to come

Concepts in Turbocharging for Improved Efficiency and Emissions Reduction explores the many ways that turbocharging will deliver concrete results in meeting the new realities of sustainable green transportation This collection of very focused technical papers selected by Mehrdad Zangeneh PhD a professor of thermo fluids at University College in London provides an assessment of several novel designs intended to improve fuel consumption and cap emissions while maintaining torque at all speeds The book is divided into four sections each addressing the most cutting edge technologies on the market today o Two Stage Turbocharging o Variable Geometry Compressors o Unconventional Compressor Configurations o Electrically Assisted Turbocharging
