Exercises in Wentworth's Analytic Geometry George Albert Wentworth,1894 Computerized Analysis of Shells David Bushnell,1981 **Parabolic Geometries I** Andreas Čap,Jan Slovák,2024-07-29 Parabolic geometries encompass a very diverse class of geometric structures including such important examples as conformal projective and almost quaternionic structures hypersurface type CR structures and various types of generic distributions The characteristic feature of parabolic geometries is an equivalent description by a Cartan geometry modeled on a generalized flag manifold the quotient of a semisimple Lie group by a parabolic subgroup Background on differential geometry with a view towards Cartan connections and on semisimple Lie algebras and their representations which play a crucial role in the theory is collected in two introductory chapters The main part discusses the equivalence between Cartan connections and underlying structures including a complete proof of Kostant s version of the Bott Borel Weil theorem which is used as an important tool For many examples the complete description of the geometry and its basic invariants is worked out in detail The constructions of correspondence spaces and twistor spaces and analogs of the Fefferman construction are presented both in general and in several examples The last chapter studies Weyl structures which provide classes of distinguished connections as well as an equivalent description of the Cartan connection in terms of data associated to the underlying geometry Several applications are discussed throughout the text **The Kernel Function and Conformal Mapping** Stefan Bergman,1950-03 The Kernel Function and Conformal Mapping by Stefan Bergman is a revised edition of The Kernel Function The author has made extensive changes in the original volume The present book will be of interest not only to mathematicians but also to engineers physicists and computer scientists The applications of orthogonal functions in solving boundary value problems and conformal mappings onto canonical domains are discussed and publications are indicated where programs for carrying out numerical work using high speed computers can be found The unification of methods in the theory of functions of one and several complex variables is one of the purposes of introducing the kernel function and the domains with a distinguished boundary This approach has been extensively developed during the last two decades This second edition of Professor Bergman s book reviews this branch of the theory including recent developments not dealt with in the first edition The presentation of the topics is simple and presupposes only knowledge of an elementary course in the theory of analytic functions of one variable Summaries of Projects Completed National Science Foundation (U.S.), International Conference on Differential Geometry and Its Applications Josef Janyška,D.
