Farley,2001-01-03 Swing trading is gaining popularity as a powerful method to increase returns and potentially lower risks by profiting from short term price moves The Master Swing Trader explains how traders can use technical analysis charting and market sentiment to make trades that hold through price fluctuations and noise with wider stops This complete practical guide to making profitable short term trades based on the author s popular Mastering the Trade online course uses dozens of charts and graphs to illustrate proven swing trading concepts and strategies Experienced day position and online traders will benefit immediately from The 7 Bells unique tools to uncover promising short term prospects Techniques to profit from low risk short sales The 4 repeating cycles for perfectly timed trades      *Planning and Operation of Electric Vehicles in Smart Grids* Mehdi Rahmani-Andebili,2023-08-14 Transportation electrification particularly using electric vehicles EV has been widely suggested to mitigate global warming and energy security issues due to their economic and environmental benefits Environmentalists are advertising EV use and governments are implementing financial incentives to expedite the transition from conventional vehicles to electric ones to achieve energy security and climate change mitigation goals At the same time EVs are becoming more affordable as their battery prices decrease It has been predicted that EV sales will soon surpass gasoline and diesel vehicle sales Therefore EVs will be one of the significant electricity customers in the future This fact hints that the uncontrolled charging and discharging of large numbers of EVs can put power systems at risk Hence optimal planning and operation of EVs is not only necessary but beneficial This collection covers recent research advancements in the planning and operation of EVs in smart grids Aglobal group of researchers and scholars present innovative approaches while covering the theoretical and experimental aspects      *Competition* Anna Olimpia,Ricardo Motta,2023-11-08 The proliferation of economic agents with market power especially those operating in the digital economy and which add unprecedented dynamic and complexity to it has sparked heated discussions among academics professionals and competition authorities around the world regarding the effects of their actions on the market and consumers Unlike classic cartels a conduct that has been treated as per se unlawful in Brazil regardless of the production of effects under Brazilian competition law unilateral conduct falls into a gray area encompassing different practices with different effects on the market In this sense examples of unilateral conduct that may be considered anticompetitive are numerous both under old and new labels predatory pricing abusive pricing resale price maintenance imposition of exclusivities parity clauses price discrimination discrimination of commercial conditions self preferencing price squeeze refusal to deal among others The competition analysis of such conduct

which may occur in traditional brick and mortar markets as well as in digital environments involving various platforms and arrangements like blockchain for the purpose of a decision by the authority on whether they constitute anticompetitive practices or not involves a highly complex analysis of various factors The analysis must consider the presence of dominant positions real or potential detrimental effects on competition efficiencies justifications economic rationale for the conduct and for some schools of thought a weighing of anticompetitive effects and efficiencies Due to the complexity specificities and dynamism of unilateral practices especially in digital markets or hybrid digital platforms there is a question of whether the instruments currently available to competition authorities are sufficient to understand and rule on such practices In this regard the analysis of various cases in relatively recent jurisprudence shows a pursuit for new forms of interpretation and application and even updates to the methodologies of analysis and of applicable legislation in order to strike a balance between intervention to curb anticompetitive practices to the extent necessary for protecting competition without resulting on undue interference in the involved markets or on disincentives to innovation Historically discussions about exclusivity clauses and resale price maintenance have been central in this type of investigation but digital platforms are effectively changing this landscape giving rise to discussions on new types of conduct or more sophisticated forms of implementing traditional types of conduct which have become possible or potentially more serious through new technologies the broad reach of platforms the collection of massive data and the international nature of the largest players in these markets Notions of relevant market theories of harm and standards of consumer welfare or protection traditionally adopted by antitrust authorities are under study and may be revised The heterogeneity of legal systems in different jurisdictions is another complicating factor for national authorities in the analysis of conduct practiced by companies with market power internationally All these analyses are present in the 25 articles written for this publication by IBRAC We have articles focused on traditional methods of analysis in traditional markets as well as articles addressing new trends and recent discussions in digital markets and platforms In times of pandemic and economic crisis as expected approaches to prices and pricing strategies are recurring themes in the works compiled here
