It presents the best practices for assessing long term memory functions as well as selecting and using evidence based instructional practices with memory impaired students. This useful and timely guide bridges theory and practice to provide professional guidance with coverage of Risk factors that can lead to long term memory impairments. How long term memory relates to other types of memory. The subcomponents and processes of long term memory and how they relate to academic achievement. What is known about the neuroanatomy of how memories are formed. The developmental trajectory of memory and learning. Common types of memory dysfunction. Author Milton Dehn draws on his extensive experience as a trainer and workshop presenter, school psychologist and educator to present both the theory and research on long term memory in children and adolescents in this book. Specific step by step guidance and hands on case studies enable professionals to identify how memory can be assessed as well as the interventions that can be linked to the results of the assessment.
