Questions

Write all your working and solutions below the question. You are expected to show how you obtained your solutions for each question.

Junior Division

1. It is known that in a set of five coins three are genuine (and have the same weight) while two coins are fakes, each of which has a different weight from a genuine coin. What is the smallest number of weighings on a scale with two cups that is needed to locate one genuine coin?
2. The number 328 is written on the board. Two players alternate writing positive divisors of 328 on the board, subject to the following rules:
 - No divisor of a previously written number may be written;
 - The player who writes 328 loses.

Who has a winning strategy, the first player or the second player?

3. Triangle XYZ is inside square KLMN shown below so that its vertices each lie on three different sides of the square. It is known that:
 - The area of square KLMN is 1.
 - The vertices of the triangle divide three sides of the square up into these ratios:

$$\begin{array}{lcl} KX : XL & = & 3 : 2 \\ KY : YN & = & 4 : 1 \\ NZ : ZM & = & 2 : 3 \end{array}$$

What is the area of the triangle XYZ? (Note that the sketch is not drawn to scale).

4. If m , n , and p are three different natural numbers, each between 2 and 9, what then are all the possible integer value(s) of the expression, $\frac{m+n+p}{m+n}$?
5. A regular 2017-gon is partitioned into triangles by a set of non-intersecting diagonals. Prove that among those triangles only one is acute-angled.

Developing Students' Statistical Reasoning Joan Garfield,Dani Ben-Zvi,2008-09-08 Increased attention is being paid to the need for statistically educated citizens statistics is now included in the K 12 mathematics curriculum increasing numbers

of students are taking courses in high school and introductory statistics courses are required in college. However, increasing the amount of instruction is not sufficient to prepare statistically literate citizens. A major change is needed in how statistics is taught. To bring about this change, three dimensions of teacher knowledge need to be addressed: their knowledge of statistical content, their pedagogical knowledge, and their statistical pedagogical knowledge, i.e., their specific knowledge about how to teach statistics. This book is written for mathematics and statistics educators and researchers. It summarizes the research and highlights the important concepts for teachers to emphasize and shows the interrelationships among concepts. It makes specific suggestions regarding how to build classroom activities, integrate technological tools, and assess students' learning. This is a unique book. While providing a wealth of examples through lessons and data sets, it is also the best attempt by members of our profession to integrate suggestions from research findings with statistics concepts and pedagogy. The book's message about the importance of listening to research is loud and clear, as is its message about alternative ways of teaching statistics. This book will impact instructors, giving them pause to consider: Is what I'm doing now really the best thing for my students? What could I do better?

J. Michael Shaughnessy, Professor, Dept. of Mathematical Sciences, Portland State University, USA

This is a much-needed text for linking research and practice in teaching statistics. The authors have provided a comprehensive overview of the current state of the art in statistics education research. The insights they have gleaned from the literature should be tremendously helpful for those involved in teaching and researching introductory courses.

Pitman's Journal of Commercial Education, 1892 New Zealand National Bibliography, 1980 Managing Market Complexity, Andrea Teglio, Simone Alfarano, Eva Camacho-Cuena, Miguel Ginés-Vilar, 2012-07-16

The field of artificial economics (AE) embraces a broad range of methodologies relying on computer simulations in order to model and study the complexity of economic and social phenomena. The overarching principle of AE is the analysis of aggregate properties of artificial economies populated by adaptive agents that are equipped with behavioural rules and specific individual targets. These aggregate properties are neither foreseen nor intended by the artificial agents; conversely, they are emerging characteristics of such artificially simulated systems. The book presents a peer-reviewed collection of papers addressing a variety of issues related to macroeconomics, industrial organization, networks, management, and finance, as well as purely methodological issues.
