agreement and disagreement as well as possible directions for future theory and research Here is a book that at the time presented the most up to date overview available on language and thought in schizophrenia Today it can be read and enjoyed in its historical context      **Children at Risk for Schizophrenia** Norman F. Watt,1984-11-30      **Schizophrenia** Ming T.

Tsuang,1982 Schizophrenia is one of the most traumatic psychiatric conditions both for the patient and his family It also suffers from frequent misinterpretation by the popular media The disorder usually manifests itself through significant periods of hallucinations and bizarre delusions but patients are not generally violent and do have periods of remission However it is often difficult for them to maintain a regular lifestyle and relationships at home and at work and many schizophrenics end up homeless on the streets of our cities This book provides a concise and up to date account of the underlying causes and symptoms of schizophrenia The authors are psychiatrists with many years of experience in the treatment of schizophrenia They look at all the current treatment options both medical and psychological together with likely side effects and the problem of compliance with treatment The role of the family and the community in caring for schizophrenic patients is also considered This book will provide a welcome source of information both for the families of schizophrenics and for the medical personnel involved in their care      **The Theory of Schizophrenic Negativism** André Thomas,Eugen Bleuler,1912

Straube,1990

Schizophrenia remains the most complex puzzling and because of its tendency towards chronicity the most severe of the mental disorders It is a very heterogeneous disorder characterized by extreme disruptions of thought perception behavior and emotion About 1 % of the population worldwide will experience at least one schizophrenic episode Most of the patients will have a number of exacerbations leading in about 30% of cases to a chronic residual state due either to the illness itself or to psychosocial environmental factors or most likely to the interaction of both Given the enormous personal hardship for patients and their relatives as well as the staggering costs of the illness for our societies research in schizophrenia has become the number one priority in many countries especially in the United States However research on the etiology of

schizophrenia has failed to establish a single causal factor and it is nowadays accepted to be multifactorial A combination of biological predisposition and environmental circumstances is assumed to be necessary for the manifestation of the illness This shift in orientation away from an either or biological or environmental e g family interaction point of view as evident in the work of the 1950s and 1960s was certainly desirable to encourage research *The Theory of Schizophrenic Negativism* Eugen Bleuler,1912 *Schizophrenia Today* D.
