

Mitosis

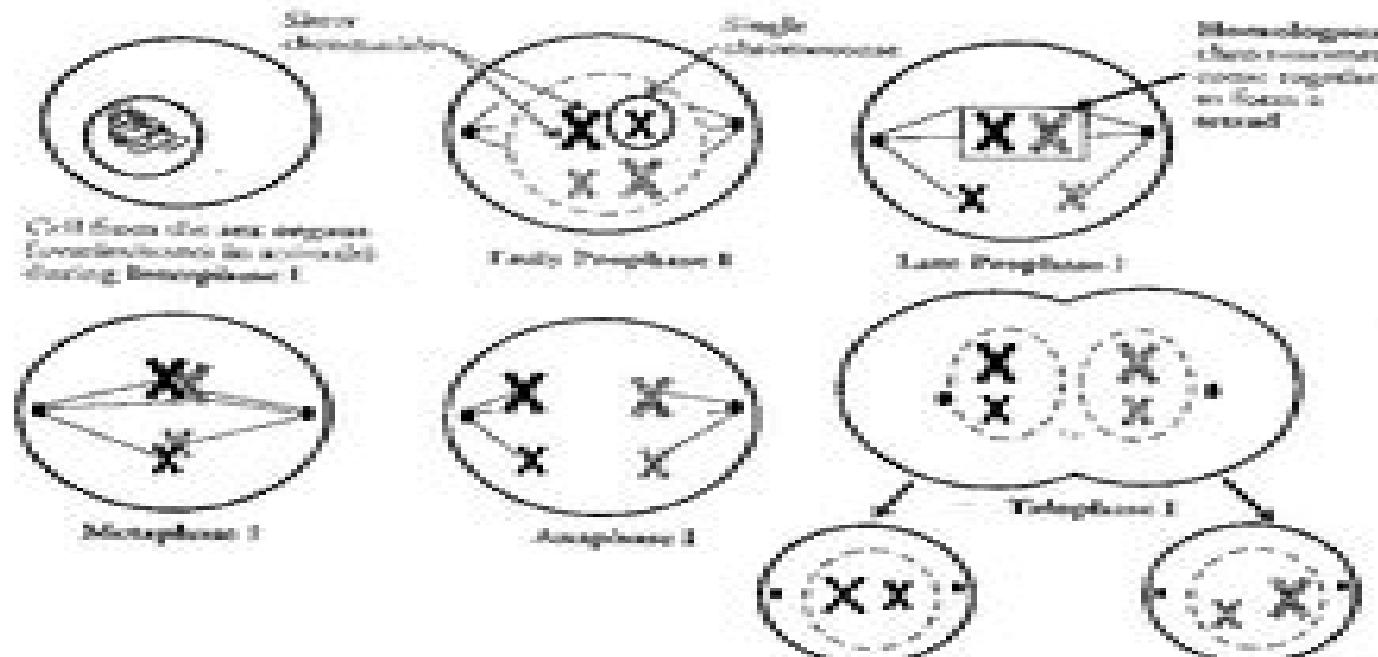

How does sexual reproduction lead to genetic variation?

WT Boyd

Cell reproduction through mitosis is nuclear division coupled with original cell. This is done for growth and repair. Sexually reproducing organisms have a second form of cell division that produces reproductive cells which build the members of the species. This process is called meiosis, and will be in. Because each time, because each cell sexually reproducing organisms would be vastly different than they are today.

Model 1 - Mitosis

1. According to Model 1, in what type of organs are the cells that have more meiosis? Explain. (See organ division and stages.)
2. Considering what you already know about mitosis in cells, when does it occur and where during Meiosis (look at cell processes in cell division).
