How to Make a Lava Lamp

What Happened?

A lava lamp works because of two different scientific principles: density and polarity.

Density is the measurement of how compact a substance is. The denser it is, the more it will sink.

If you mix oil and water, you'll find that the water is heavier than the oil, so it sinks to the bottom of the oil.

Adding food coloring and water to the oil makes the water sink to the bottom of the oil. The water is heavier than the oil, so it sinks to the bottom of the oil.

Oil molecules, however, are non-polar. They don't have a positive charge, so they are not attracted to the water molecules at all. This is why oil and water don't mix. Instead of mixing, a light color is made. The water is still at the bottom, but the oil is on top. The water is still at the bottom, but the oil is on top. The water is still at the bottom, but the oil is on top.

Science

What You Do

- Step 1: Fill the flask with oil.
- Step 2: Fill the flask with water.
- Step 3: Add a few drops of food coloring.
- Step 4: Add a few Alka-Seltzer tablets.
- Step 5: Watch the reaction.
