Scientific Papers Made Easy Stuart West, Lindsay Turnbull, 2023-01-30 Writing scientific publications is a fundamental step in the research process. Furthermore, as science becomes more interdisciplinary and the number of journals continues to expand, individual papers increasingly need to stand out to be read and have any form of impact. It is widely assumed that students and early career scientists will simply acquire the necessary expertise. However, this could not be further from the truth; many early career scientists find writing both intimidating and overwhelming. Writing is a skill that needs to be learnt and actively developed. This novel book's fundamental principle is simple: the reader must come first. The purpose of a scientific paper is to pass on knowledge, and so impactful writing must focus on attracting, holding, and illuminating readers. The authors demonstrate how just a few simple pointers can significantly improve both writing quality and impact. They tackle each component of a paper in turn, providing a simple framework that makes clear what needs to be included and what doesn't and in what order. They also provide advice for writing up different types of science, from laboratory experiments to theoretical modelling. The focus throughout is on the need to use simple, jargon-free English and to assume that the reader has little or no prior knowledge. In summary, the book is about writing better scientific papers that are more likely to be read and have impact. *Scientific Papers Made Easy* is targeted at a broad audience of students and professionals across the biological life and human sciences. It uses simple biological and human examples that assume no prior knowledge and will resonate with any scientist.

Vertebrate Palaeontology Michael J. Benton, 2024-07-15 All new edition of the world's leading vertebrate palaeontology textbook, now addressing key evolutionary transitions and ecological drivers for vertebrate evolution. Richly illustrated with colour illustrations of the key species and cladograms of all major vertebrate taxa. *Vertebrate Palaeontology* provides a complete account of the evolution of vertebrates, including macroevolutionary trends and drivers that have shaped their organs and body plans, key transitions such as terrestrialization, endothermy, flight, and impacts of mass extinctions on biodiversity, and ecological drivers behind the origin of chordates and vertebrates, their limbs, jaws, feathers, and hairs. This revised and updated fifth edition features numerous recent examples of breakthrough discoveries in line with the current macroevolutionary approach in palaeontology research, such as the evolutionary drivers that have shaped vertebrate development. Didactical features have been enhanced and include new functional and developmental feature spreads, key questions, and extensive references to useful websites. Written by a leading academic in the field, *Vertebrate Palaeontology* discusses topics such as Palaeozoic fishes, including Cambrian vertebrates, placoderms, armoured monsters, *Pan-Chondrichthyes* such as sharks and rays, and *Osteichthyes* bony fishes. The first tetrapods, covering problems of life on land, diversity of Carboniferous tetrapods and temnospondyls, and reptiliomorphs following the Carboniferous. Mesozoic reptiles such as Testudinata (turtles), Crocodylomorpha, Pterosauria, Dinosauria, great sea dragons, and Lepidosauria (lizards and snakes). Mammals of the southern and northern hemispheres, covering Xenarthra (sloths, anteaters).
