Heart Dissection

Directions:

1. ~~Examine~~ **dissect** a preserved sheep heart. Permit your teacher to demonstrate the removal of the pericardial sac, if possible. Allow your teacher to cut the largest blood vessel in the heart away from the rest of the heart circulation.

2. Place the heart on the bread bag with the ventral surface up ("ventral" is the side of the heart closest to your chest). Proceed as follows:

a. Locate the ventral pericardium, which appears as a thin, translucent layer

on the surface of the heart.

i. Use a scalpel to remove a portion of the layer and separate the pericardium from the heart.

ii. Allow your teacher to remove all of the fat that is on all surfaces of the ventral pericardium. This will allow the heart to be seen without the fat that is on the ventral pericardium.

b. Identify the following:

- Right Atrium
- Right Ventricle
- Pulmonary Artery
- Left Atrium
- Left Ventricle
- Aorta

3. Examine the internal surface of the heart that will appear to your teacher.

Locate the coronary of the following (the coronary

blood vessels that bring the right atrium).

Examine the coronary by opening a smaller piece through them.
