Adaptive User Interfaces:

Adaptive User Interfaces Dermot Browne, 2016-03-05 This book describes techniques for designing and building adaptive user interfaces developed in the large AID project undertaken by the contributors Describes one of the few large scale adaptive interface projects in the world Outlines the principles of adaptivity in human computer interaction

Adaptive User Interfaces M. Schneider-Hufschmidt, T. Kühme, Uwe Malinowski, 1993-07-08 The area of intelligent and adaptive user interfaces has been of interest to the research community for a long time Much effort has been spent in trying to find a stable theoretical base for adaptivity in human computer interaction and to build prototypical systems showing features of adaptivity in real life interfaces To date research in this field has not led to a coherent view of problems let alone solutions A workshop was organized which brought together a number of well known researchers in the area of adaptive user interfaces with a view to develop a coherent view of the results accomplished in the field organize basic ideas which might lead to a more general methodology for adaptivity in order to overcome the problem of specialized non generalizable solutions and discuss possible areas for future research in the field and to define criteria for the selection of the most promising directions of such research The results of the workshop are presented in this volume The authors have collected papers from the participants which describe both their research and their views on questions which were dealt with during the workshop A state of the art report and taxonomy for the field of adaptive interfaces and a discussion summary are also included in this volume

Towards the Systematic Assessment and Design of Adaptive User Interfaces Theophanis Tsandilas, 2007 Adaptive user interfaces have been suggested as an alternative to help users deal with information overload and the complexity of software However experimental studies have questioned their effectiveness while the introduction of adaptation techniques in commercial applications has had limited success The negative past experience has caused skepticism among researchers in Human Computer Interaction as adaptive behaviour has been linked to poor designs that have violated well established usability principles Several researchers have suggested that adaptable user interfaces which are interfaces adapted by the user rather than the system itself should be considered as a better alternative This dissertation explores the design space of adaptation techniques in a range of user interfaces identifies tradeoffs between adaptive and adaptable user interfaces and makes recommendations about their design and evaluation In particular it examines three different types of interfaces hypermedia systems lists and hierarchical drop down menus New adaptation techniques are proposed for each interface We explore both techniques that assist navigation and visual search and techniques that facilitate movement and selection We address limitations of existing techniques by exploring designs that merge automation with user control The proposed designs are extensively evaluated Specifically the dissertation documents a total of seven user studies Through our evaluation work we

explore the role of adaptation accuracy as a measure of the quality of automatic inference and decision making and evaluate its effect on the success of adaptation techniques This allows us to investigate strengths and limitations of the techniques that we propose and come up with recommendations about the design and evaluation of adaptive user interfaces Overall the dissertation has three major contributions 1 the introduction of designs of hypermedia systems that combine automation and direct user manipulation 2 the systematic treatment of accuracy as a way to assess the effectiveness of adaptation techniques and 3 the systematic design and evaluation of bubbling menus a new design of adaptive and adaptable menus **User**

Interfaces for Wearable Computers Hendrik Witt,2009-04-20 Hendrik Witt examines user interfaces for wearable computers and analyses the challenges imposed by the wearable computing paradigm through its dual task character He introduces a special software tool as well as the HotWire evaluation method to facilitate user interface development and evaluation Based on the results of different end user experiments conducted to study the management of interruptions with gesture and speech input in a wearable computing scenario the author derives design guidelines and general constraints for forthcoming interface designs Human-Computer Interaction.
