## Adhi University Guide:

The Practical Guides on Deep Learning Using SCIKIT-LEARN, KERAS, and TENSORFLOW with Python GUI Vivian Siahaan, Risman Hasiholan Sianipar, 2023-06-17

In this book you will learn how to use TensorFlow Keras Scikit Learn OpenCV Pandas NumPy and other libraries to implement deep learning on recognizing traffic signs using GTSRB dataset detecting brain tumor using Brain Image MRI dataset classifying gender and recognizing facial expression using FER2013 dataset

In Chapter 1 you will learn to create GUI applications to display image histogram. It is a graphical representation that displays the distribution of pixel intensities in an image. It provides information about the frequency of occurrence of each intensity level in the image. The histogram allows us to understand the overall brightness or contrast of the image and can reveal important characteristics such as dynamic range exposure and the presence of certain image features.

In Chapter 2 you will learn how to use TensorFlow Keras Scikit Learn Pandas NumPy and other libraries to perform prediction on handwritten digits using MNIST dataset. The MNIST dataset is a widely used dataset in machine learning and computer vision particularly for image classification tasks. It consists of a collection of handwritten digits from zero to nine where each digit is represented as a 28x28 grayscale image. The dataset was created by collecting handwriting samples from various individuals and then preprocessing them to standardize the format. Each image in the dataset represents a single digit and is labeled with the corresponding digit it represents. The labels range from 0 to 9 indicating the true value of the handwritten digit.

In Chapter 3 you will learn how to perform recognizing traffic signs using GTSRB dataset from Kaggle. There are several different types of traffic signs like speed limits, no entry, traffic signals, turn left or right, children crossing, no passing of heavy vehicles, etc. Traffic signs classification is the process of identifying which class a traffic sign belongs to. In this Python project you will build a deep neural network model that can classify traffic signs in image into different categories. With this model you will be able to read and understand traffic signs which are a very important task for all autonomous vehicles.

You will build a GUI application for this purpose. In Chapter 4 you will learn how to perform detecting brain tumor using Brain Image MRI dataset. Following are the steps taken in this chapter:

- Dataset Exploration: Explore the Brain Image MRI dataset from Kaggle. Describe the structure of the dataset, the different classes (tumor vs non-tumor) and any preprocessing steps required.
- Data Preprocessing: Preprocess the dataset to prepare it for model training. This may include tasks such as resizing images, normalizing pixel values, splitting data into training and testing sets, and creating labels.
- Model Building: Use TensorFlow and Keras to build a deep learning model for brain tumor detection. Choose an appropriate architecture such as a convolutional neural network (CNN) and configure the model layers.
- Model Training: Train the brain tumor detection model using the preprocessed dataset. Specify the loss function, optimizer, and evaluation metrics.
- Model Evaluation: Evaluate the trained model on the testing dataset. Calculate metrics such as accuracy, precision, recall, and F1 score to assess the model's performance.
- Prediction and Analysis: Use the trained model to predict brain tumor status for new images and analyze the results.

Visualization Use the trained model to make predictions on new MRI images Visualize the predicted results alongside the ground truth labels to demonstrate the effectiveness of the model Finally you will build a GUI application for this purpose In Chapter 5 you will learn how to perform classifying gender using dataset provided by Kaggle using MobileNetV2 and CNN models Following are the steps taken in this chapter Data Exploration Load the dataset using Pandas perform exploratory data analysis EDA to gain insights into the data and visualize the distribution of gender classes Data Preprocessing Preprocess the dataset by performing necessary transformations such as resizing images converting labels to numerical format and splitting the data into training validation and test sets Model Building Use TensorFlow and Keras to build a gender classification model Define the architecture of the model compile it with appropriate loss and optimization functions and summarize the model s structure Model Training Train the model on the training set monitor its performance on the validation set and tune hyperparameters if necessary Visualize the training history to analyze the model s learning progress Model Evaluation Evaluate the trained model s performance on the test set using various metrics such as accuracy precision recall and F1 score Generate a classification report and a confusion matrix to assess the model s performance in detail Prediction and Visualization Use the trained model to make gender predictions on new unseen data Visualize a few sample predictions along with the corresponding images Finally you will build a GUI application for this purpose In Chapter 6 you will learn how to perform recognizing facial expression using FER2013 dataset using CNN model The FER2013 dataset contains facial images categorized into seven different emotions anger disgust fear happiness sadness surprise and neutral To perform facial expression recognition using this dataset you would typically follow these steps Data Preprocessing Load and preprocess the dataset This may involve resizing the images converting them to grayscale and normalizing the pixel values Data Split Split the dataset into training validation and testing sets The training set is used to train the model the validation set is used to tune hyperparameters and evaluate the model s performance during training and the testing set is used to assess the final model s accuracy Model Building Build a deep learning model using TensorFlow and Keras This typically involves defining the architecture of the model selecting appropriate layers such as convolutional layers pooling layers and fully connected layers and specifying the activation functions and loss functions Model Training Train the model using the training set This involves feeding the training images through the model calculating the loss and updating the model s parameters using optimization techniques like backpropagation and gradient descent Model Evaluation Evaluate the trained model s performance using the validation set This can include calculating metrics such as accuracy precision recall and F1 score to assess how well the model is performing Model Testing Assess the model s accuracy and performance on the testing set which contains unseen data This step helps determine how well the model generalizes to new unseen facial expressions Prediction Use the trained model to make predictions on new images or live video streams This involves detecting faces in the images using OpenCV extracting facial features and feeding the processed images into the model for

prediction Then you will also build a GUI application for this purpose [Handbook of Addiction, Recovery and Quality of Life](#) Maria Florence,Wouter Vanderplasschen,Mansoo Yu,Jessica De Maeyer,Shazly Savahl,2025-01-25 This handbook brings together research and innovation across two important and related fields quality of life QoL and addiction recovery Though both fields of research are equally vibrant this volume brings together the advancing scholarly exploration of the intersection between QoL and addiction recovery It provides comprehensive coverage of the theoretical perspectives on QoL in the field of addiction and recovery instruments and methodologies to assess QoL different types of addiction in specific populations and QoL and practices and interventions for supporting recovery and promoting QoL It importantly includes international and intercultural perspectives on QoL and addiction recovery By including sound theoretical conceptual historical empirical and cross cultural contributions on QoL and addictions the volume offers many opportunities for advancing support treatment and recovery of persons with addiction problems based on their subjective perspectives and experiences This handbook is a go to resource for a wide interdisciplinary readership interested in quality of life research subjective well being public health and addiction research [\*\*Encyclopedia of American National Parks\*\*](#) Sara Dant Ewert,Hal Rothman,2004 Examines the history development and legacy of the National Park System [\*Readers' Guide to Periodical Literature\*](#) ,1917
