Fish Pheromones and Related Cues P. W. Sorensen,Brian D. Wisenden,2015-03-16 Pheromones are chemical cues that pass between members of the same species that convey specific adaptive information These cues and related chemicals whose function are less well defined are especially important to fishes because of their aquatic environments and complex behaviors Pheromones are also of increasing interest in both basic and applied aspects of fish biology because they can be used to manipulate fish behavior and may explain phenomena such as fishery collapse Fish Pheromones and Related Cues provides a timely synthesis of this growing body of research in freshwater and marine species and explores everything from how these chemical signals evolved are produced released and then processed and finally to potential applications in fish culture and conservation Fish Pheromones and Related Cues opens with a useful overview on the theory of chemical communication and definitions Chapters then progress by examining the biological importance of pheromones in inter and intra species communication the role these chemical cues play in a variety biological functions from reproduction to predation and then how they evolved and are detected and recognized by fish nervous systems Final chapters provide valuable insight into how pheromones can be measured how pheromonal disruption can explain effects of environmental pollution and lastly how they pheromones are being applied in real world efforts to culture fish species and to conserve our wild populations and control invasive species With far reaching economic evolutionary and ecological implications Fish Pheromones and Related Cues will be an essential volume for anyone working in the fields of chemical communication fish biology fisheries science aquatic conservation ecology invasive species control and aquaculture

emotion in multimodal settings Martin Klasen, Benjamin Kreifelts, Yu-Han Chen, Janina Seubert, Klaus Mathiak, 2015-05-06 Our everyday life is characterized by a multitude of emotionally relevant cues that we perceive and communicate via various sensory channels. This does not only encompass the obvious cases of auditory and visual modalities but also olfactory, gustatory and even tactile stimuli. Any kind of emotional situation in a natural setting is usually a multimodal experience. A friend welcomes us with warm words, a smile and a happy voice; the sight of our favourite food is accompanied by a seductive smell and a delicious taste; the thrill of watching an exciting movie scene is intensified by a gripping soundtrack. In these situations the signals from various senses do not stand on their own; they interact and create a unified emotional experience. Recent neuroscientific research has begun to accommodate this inherent multimodality of emotions in natural situations by studying the interaction of affectively relevant information from more than one sensory channel. Fascinating new aspects emerge concerning the neurobiology of emotion processing and there is evidence that integrating emotional cues from various sources invokes brain processes that go beyond the well known patterns observed during unimodal stimulation. The aim of this volume is to present novel and interesting studies dealing with the multimodality of emotions and their neural processing. This includes findings from novel paradigms beyond the classical stimulus response pattern, fascinating new insights into the interaction of the chemical senses, new analysis methods, comprehensive reviews of selected topics, multimodality in social interactions and clinical perspectives. Taken together the studies of this volume thus help us to better understand the interplay of various senses in our daily emotional experiences. *QST.* , 1954
