

An extensive test programme led to the development and verification of an optional kit for the T77, including deflection of the handle and towed-hand levers, an alternate release switch on the underside of the controls, protection on the tow-hand levers and for the hydraulic brake line and the speed brake control valve, strengthening of the VIBU, DMS and ATC controls on the underside of the handle and various adaptations ("show your pic" / "show me the engine bracket"). The deflector on the forward-rotating nose wheel is of such design that it cannot be blocked in the normal wheel lock and

Reising took the document to himself as third jet transport before the 50th and 155th in November 1960, although the formal commitment to put the new type into production had to wait until final military orders were forthcoming. In the event, the point was reached on 14 February 1961 when the German airline Lufthansa announced a contract for 75 Boeing 707s for a period, including spares, of about 100 (100:12:10:00:00). The launch decision came after a period of intensive discussion.

B737 Technical Guide :

The Boeing 737 Technical Guide Chris Brady, 2021-11-14 This is an illustrated technical guide to the Boeing 737 aircraft Containing extensive explanatory notes facts tips and points of interest on all aspects of this hugely successful airliner and showing its technical evolution from its early design in the 1960s through to the latest advances in the MAX The book provides detailed descriptions of systems internal and external components their locations and functions together with pilots notes and technical specifications It is illustrated with over 500 photographs diagrams and schematics Chris Brady has written this book after many years developing the highly successful and informative Boeing 737 Technical Site known throughout the world by pilots trainers and engineers as the most authoritative open source of information freely available about the 737

Advancements in Electric Machines J. F. Gieras, 2008-11-14 Traditionally electrical machines are classified into d c commutator brushed machines induction asynchronous machines and synchronous machines These three types of electrical machines are still regarded in many academic curricula as fundamental types despite that d c brushed machines except small machines have been gradually abandoned and PM brushless machines PMBM and switched reluctance machines SRM have been in mass production and use for at least two decades Recently new topologies of high torque density motors high speed motors integrated motor drives and special motors have been developed Progress in electric machines technology is stimulated by new materials new areas of applications impact of power electronics need for energy saving and new technological challenges The development of electric machines in the next few years will mostly be stimulated by computer hardware residential and public applications and transportation systems land sea and air At many Universities teaching and research strategy oriented towards electrical machinery is not up to date and has not been changed in some countries almost since the end of the WWII In spite of many excellent academic research

achievements the academia industry collaboration and technology transfer are underestimated or quite often neglected Underestimation of the role of industry unfamiliarity with new trends and restraint from technology transfer results with time in lack of external nancial support and drastic cline in the number of students interested in Power Electrical Engineering
