

THE ELECTRO-MAGNETIC SPECTRUM

The Electromagnetic Spectrum

Electromagnetic radiation can travel through empty space. Other types of waves, such as sound, need a medium to move through. All forms of electromagnetic radiation reside on the electromagnetic spectrum, which ranks radiation from the lowest energy (longest wavelength) to the highest energy (shortest wavelength). The higher the energy, the stronger, and therefore more dangerous, the radiation.

ELECTROMAGNETIC SPECTRUM

Radio waves

Radio waves have the longest wavelength in the electromagnetic spectrum. They are invisible to our eyes. They bring music to our radios, sound and picture to our televisions, and carry signals to our cell phones.

Microwaves

Also invisible, we use microwaves to heat our food quickly. Telecommunications satellites use microwaves to transmit voice through the phone. Microwave energy can penetrate walls, clouds or smoke, and thus is useful for transmitting information. Some microwaves are used to monitor the Doppler radar your weatherman uses on the news.

In the visible and invisible portions of the electromagnetic spectrum, your eyes can see visible light. Infrared light is used to change the channel. The heat infrared radiation every day. Infrared photography can detect temperature differences. Doctors can use infrared radiation, which is how they are able to locate warm-blooded prey in the dark.

Visible

This is the only part of the electromagnetic spectrum we can see. We see the different wavelengths in this band of the spectrum as the colors of the rainbow. The sun, for example, is a natural source of visible waves. When looking at an object, our eyes see the color of light reflected, and all other colors are absorbed.

Ultraviolet

Ultraviolet (UV) rays are what cause us to become sunburned. Humans can't see UV rays, but some insects can. Our atmosphere's ozone layer blocks most UV rays. However, as our ozone layer depletes due to use of chlorofluorocarbons (CFCs), UV levels are increasing. This can lead to health effects like skin cancer.

X-rays

X-rays are very high-energy light waves. You're most familiar with their use in a doctor's office, but X-rays also naturally occur in space. But don't worry: X-rays can't penetrate from outer space to the Earth's surface.

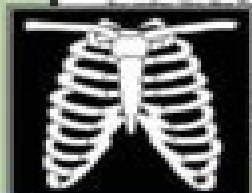

Gamma rays

Gamma rays have the most energy and shortest wavelength of the entire spectrum. Nuclear explosions and radioactive atoms generate these rays. Gamma rays can kill living cells, and medical professionals sometimes use them to destroy cancerous cells. In deep space, gamma ray bursts occur daily, but their origins are still a mystery.

Using the information above and your own research, answer the following questions:

1. What is the electromagnetic spectrum?
2. Can electromagnetic waves travel in a vacuum?
3. List the waves of the EM spectrum (gamma rays, x-rays, visible, microwaves, radio waves, ultraviolet and infrared) in order from longest to shortest wavelength.
4. How does the wavelength affect the energy of a wave? Explain your answer.
5. Next to each everyday object, write which electromagnetic wave it uses to function.
