Interaction between objects when in contact. These forces include gravity, tension, and contact force and friction.	<p>Gravity is a universal attractive force that acts on the mass of the Earth and on all other objects, pulling them toward the center of the Earth. Gravity is the force that pulls objects toward the center of the Earth. Gravity is the force that pulls objects toward the center of the Earth. Gravity is the force that pulls objects toward the center of the Earth.</p> <p>Friction and magnetic forces are components of the interaction of objects. Friction is a repulsive force that acts on a object and pulls it back. It is caused by magnetic forces and is often used to recycle paper. Friction and magnetic forces are components of the interaction of objects. Friction and magnetic forces are components of the interaction of objects. Friction and magnetic forces are components of the interaction of objects. Friction and magnetic forces are components of the interaction of objects.</p> <p>Friction describes the motion of objects. Friction is a component of a system's energy or the amount of force that is needed to move an object. Friction is a component of the motion of objects. Friction is a component of the motion of objects.</p> <p>Understanding these forces helps explain why the following objects and magnetic components interact.
