

Photosynthesis: What's in a Leaf?

What is the relationship between the structure and the function in a leaf?

Why?

What would the world be like without leaves—no grass for ball fields, no beautiful landscaping? It would also mean no oxygen for animals and no food for heterotrophs. Leaves are like living machines that recycle the carbon and oxygen in our environment. This process, driven by the sun's energy, allows for a constant supply of oxygen and food for the inhabitants of Earth.

Model 1 – Leaf Sun-Catcher

General Equation for Photosynthesis

1. List three things entering the leaf in Model 1. (Two of these are the reactants of photosynthesis)

Sunlight, water, and carbon dioxide

2. List three substances leaving the leaf. (Two of these are the products of photosynthesis)

Oxygen, water as a gas, and sugars

3. Which substance is both entering and leaving?

Water

4. How is the substance you identified in Question 3 changed between its entry and its exit?
