

Triangle Midsegment Notes

The midsegment of a triangle is a segment that connects the midpoints of two sides of the triangle.

D and E are midpoints.
DE is a midsegment.

Every Triangle has 3 midsegments.

Midsegment Theorem

The segment connecting the midpoints of two sides of a triangle is parallel to the third side and is half as long as that side.

$$\overline{DE} \parallel \overline{AB} \qquad \overline{DE} = \frac{1}{2}\overline{AB} \qquad 2\overline{DE} = \overline{AB}$$

Example 1: In the diagram, $\overline{RR'}$ and $\overline{R'P}$ are midsegments of $\triangle RNL$. Find AL , PL , NP , and AM .

$$AL = \underline{\hspace{2cm}} \qquad PL = \underline{\hspace{2cm}}$$

$$NP = \underline{\hspace{2cm}} \qquad AM = \underline{\hspace{2cm}}$$

Example 2: Find the value of x , the length of YW , and $m\angle YPR$.

$$x = \underline{\hspace{2cm}}$$

$$YW = \underline{\hspace{2cm}}$$

$$m\angle YPR = \underline{\hspace{2cm}}$$

The Contest Problem Book VIII J. Douglas Faires, David Wells, 2022-02-25 For more than 50 years the Mathematical Association of America has been engaged in the construction and administration of challenging contests for students in American and Canadian high schools The problems for these contests are constructed in the hope that all high school students interested in mathematics will have the opportunity to participate in the contests and will find the experience mathematically enriching These contests are intended for students at all levels from the average student at a typical school who enjoys mathematics to the very best students at the most special school In the year 2000 the Mathematical Association of America initiated the American Mathematics Competitions 10 AMC 10 for students up to grade 10 The Contest Problem Book VIII is the first collection of problems from that competition covering the years 2001 2007 J Douglas Faires and David Wells were the joint directors of the AMC 10 and AMC 12 during that period and have assembled this book of problems and solutions There are 350 problems from the first 14 contests included in this collection A Problem Index at the back of the book classifies the problems into the following major subject areas Algebra and Arithmetic Sequences and Series Triangle Geometry Circle Geometry Quadrilateral Geometry Polygon Geometry Counting Coordinate Geometry Solid Geometry Discrete Probability Statistics Number Theory and Logic The major subject areas are then broken down into subcategories for ease of reference The problems are cross referenced when they represent several subject areas *Holt Algebra 1 2003* Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2003 Geometry Ron Larson, 1995 **Let's Review Regents: Geometry, Sixth Edition** Andre Castagna, 2025-01-07 Prep for the NYS Regents exam with this comprehensive classroom companion featuring detailed review and practice for the most frequently tested topics *New York Math: Math A*, 2000

A Decade of the Berkeley Math Circle Zvezdelina Stankova, Tom Rike, 2015-02-03 Many mathematicians have been drawn to mathematics through their experience with math circles The Berkeley Math Circle BMC started in 1998 as one of the very first math circles in the U S Over the last decade and a half 100 instructors university professors business tycoons high school teachers and more have shared their passion for mathematics by delivering over 800 BMC sessions on the UC Berkeley campus every week during the school year This second volume of the book series is based on a dozen of these sessions encompassing a variety of enticing and stimulating mathematical topics some new and some continuing from Volume I from dismantling Rubik's Cube and randomly putting it back together to solving it with the power of group theory from raising knot eating machines and letting Alexander the Great cut the Gordian Knot to breaking through knot theory via the Jones polynomial from entering a seemingly hopeless infinite raffle to becoming friendly with multiplicative functions in the land of Dirichlet M bius and Euler from leading an army of jumping fleas in an old problem from the International Mathematical Olympiads to improving our own essay writing strategies from searching for optimal paths on a hot summer day to questioning whether Archimedes was on his way to discovering trigonometry 2000 years ago Do some of these

scenarios sound bizarre having never before been associated with mathematics Mathematicians love having fun while doing serious mathematics and that love is what this book intends to share with the reader Whether at a beginner an intermediate or an advanced level anyone can find a place here to be provoked to think deeply and to be inspired to create In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession Titles in this series are co published with the Mathematical Sciences Research Institute MSRI
