**The Arithmetic of Function Fields** David Goss,David R. Hayes,Michael Rosen,2011-06-24 This series is devoted to the publication of monographs lecture resp seminar notes and other materials arising from programs of the OSU Mathematical Research Institute This includes proceedings of conferences or workshops held at the Institute and other mathematical writings

**The Mathematical Legacy of Srinivasa Ramanujan** M. Ram Murty,V. Kumar Murty,2012-10-05 Srinivasa Ramanujan was a mathematician brilliant beyond comparison who inspired many great mathematicians There is extensive literature available on the work of Ramanujan But what is missing in the literature is an analysis that would place his mathematics in context and interpret it in terms of modern developments The 12 lectures by Hardy delivered in 1936 served this purpose at the time they were given This book presents Ramanujan's essential mathematical contributions and gives an informal account of some of the major developments that emanated from his work in the 20th and 21st centuries It contends that his work still has an impact on many different fields of mathematical research This book examines some of these themes in the landscape of 21st century mathematics These essays based on the lectures given by the authors focus on a subset of Ramanujan's significant papers and show how these papers shaped the course of modern mathematics

*Number Theory: Arithmetic In Shangri-la - Proceedings Of The 6th China-japan Seminar* Shigeru Kanemitsu,Hongze Li,Jianya Liu,2013-02-20 This volume is based on the successful 6th China Japan Seminar on number theory that was held in Shanghai Jiao Tong University in August 2011 It is a compilation of survey papers as well as original works by distinguished researchers in their respective fields The topics range from traditional analytic number theory additive problems divisor problems Diophantine equations to elliptic curves and automorphic L functions It contains new developments in number theory and the topics complement the existing two volumes from the previous seminars which can be found in the same book series

*The American Mathematical Monthly*,1959-08 **Standard Practical Plumbing** Philip John Davies,1896 *Area, Lattice Points, and Exponential Sums* M. N. Huxley,1996-06-13 In analytic number theory a large number of problems can be reduced to problems involving the estimation of exponential sums in one or several variables This book is a thorough treatment of the developments arising from the method developed by Bombieri and Iwaniec in 1986 for estimating the Riemann zeta function on the line  $s = 1/2$  Huxley and his coworkers mostly Huxley have taken this method and vastly extended and improved it The powerful techniques presented here go considerably beyond older methods for estimating exponential sums such as van de Corput's method The potential for the method is far from being exhausted and there is considerable motivation for other researchers to try to master this subject However anyone currently trying to learn all of this material has the formidable task of wading through numerous papers in the literature This book simplifies that task by presenting all of the relevant literature and a good part of the background in one package The audience for the book will be mathematics graduate students and faculties with a research interest in analytic theory more specifically those with an interest in

exponential sum methods The book is self contained any graduate student with a one semester course in analytic number theory should have a more than sufficient background    Mathematical Reviews ,2007    International Symposium in Memory of Hua Loo Keng Sheng Gong,1991    *Indian Mathematics in Sanskrit* Venkatesha Murthy,2005    Reviews in Number Theory 1973-83 Richard K.
