*Constructing Educational Achievement* Sivanes Phillipson,Kelly Ku,Shane Phillipson,2014-06-03 International interest focuses on why pupils from East Asia tend to outperform pupils from the West and scholars have proposed a number of possible explanations to account for these international trends Using Vygotsky s theory 1978 as a conceptual framework to construct school achievement this book puts forward culturally relevant context for understanding developmental aspects of children s school achievement and their implication to classroom practice and education progress Converging the two important lines of inquiry the child factor and the sociocultural factor this book showcases evidence based scholarly works from across the globe that shed light on causes of academic achievement in different contexts The book brings together eminent scholars from early childhood primary education secondary and vocational education who expertly capture the vitality of development and processes of specific child factors and their interaction with their environment that explain their school achievement Foregrounded in the five planes of cultural historical institutional social personal and mental the research explain how children think learn and form the will to perform amidst the changing social and family environment and challenging school and educational environment

Neural & Bio-inspired Processing and Robot Control Huanqing Wang,2019-01-24 This Research Topic presents bio inspired and neurological insights for the development of intelligent robotic control algorithms This aims to bridge the inter disciplinary gaps between neuroscience and robotics to accelerate the pace of research and development

**Mapping Human Sensory-Motor Skills for Manipulation onto the Design and Control of Robots** Matteo Bianchi,Gionata Salvietti,2019-03-25 Humans are endowed with extraordinary sensory motor capabilities that enable a successful interaction with and exploration of the environment as is the case of human manipulation Understanding and modeling these capabilities represents an important topic not only for neuroscience but also for robotics in a mutual inspiration both to inform the design and control of artificial systems and at the same time to increase knowledge on the biological side Within this context synergies i e goal directed actions that constrain multi DOFs of the human body and can be defined at the kinematic muscular neural level have gained increasing attention as a general simplified approach to shape the development of simple and effective artificial devices The execution of such purposeful sensory motor primitives on the biological side leverages on the interplay of the sensory motor control at central and peripheral level and the interaction of the human body with the external world This interaction is particularly important considering the new concept of robotic soft manipulation i e soft adaptable yet robust robotic hands that can deform with the external environment to multiply their grasping and manipulation capabilities Under this regard a preeminent role is reserved to touch being that skin isour primary organ to shape our knowledge of the external world and hence to modify it in interaction with the efferent parts This Research Topic reports results on the mutual inspiration between neuroscience and robotics and on how it is possible to translate neuroscientific findings on human manipulation into engineering guidelines for

simplified systems able to take full advantage from the interaction and hence exploitation of environmental constraints for task accomplishment and knowledge acquisition     **Advanced Computational Intelligence Methods for Processing Brain Imaging Data** Kaijian Xia, Yizhang Jiang, Yu-Dong Zhang, Mohammad Khosravi, Yuanpeng Zhang, 2022-11-09

**Gamification: Concepts, Methodologies, Tools, and Applications** Management Association, Information Resources, 2015-03-31 Serious games provide a unique opportunity to engage students more fully than traditional teaching approaches Understanding the best way to utilize games and play in an educational setting is imperative for effectual learning in the twenty first century Gamification Concepts Methodologies Tools and Applications investigates the use of games in education both inside and outside of the classroom and how this field once thought to be detrimental to student learning can be used to augment more formal models This four volume reference work is a premier source for educators administrators software designers and all stakeholders in all levels of education     Physical Activity, Self-Regulation, and Executive Control Across the Lifespan Sean P. Mullen, Peter Hall, 2016-02-05 There is overwhelming evidence linking increased physical activity with positive changes in cognitive functioning and brain health Much of what we know about these interrelationships comes from aerobic exercise training studies with older adults and children This literature has paved the way for the neuroscientific investigation of mechanisms responsible for exercise induced cognitive and brain health enhancement a list that ranges from molecular changes to systemic changes in executive control and neural connectivity A new perspective has also emerged that aims to understand executive control processes that may underlie the regulation of health behavior In accordance with this view physical activity falls under the umbrella of health behaviors that require a substantial amount of executive control Executive control is a limited resource and the aging process depletes this resource People who regularly exercise are said to have higher self regulatory control planning goal shielding and impulse control than irregular exercisers The successful maintenance of physical activity participation in lieu of daily cognitive stressors likely reflects an adaptive resistance to control failures Indeed a handful of studies have shown the relationship between greater executive control and subsequently higher levels of physical activity However little is known about the neural correlates of physical activity adherence or sedentary behavior with the view that neurocognitive factors have an antecedent and reciprocal influence on these behaviors No research has focused on the brain networks responsible for the self regulation of physical activity which likely overlaps with structures and functions playing critical roles in the regulation of other health behaviors Interdisciplinary investigations are needed to explain the extent to which physical activity self regulation and self regulatory failure is dependent upon or under the influence of executive control processes and brain networks Understanding the degree to which self regulatory resources may be enhanced restored and trained will have enormous implications for basic science and applied fields It is also of great import to understand whether or not physical activity self regulation is a domain specific behavior associated with specific brain networks or to determine the extent to

which regulatory network sharing occurs The aim of this Frontiers Research Topic is to curate contributions from researchers in social and cognitive neurosciences and related fields whose work involves the study of physical activity behavior self regulation and executive control For this Research Topic we therefore solicit reviews original research articles and opinion papers which draw theoretical or empirical connections related to sustained physical activity behavior self regulatory strategies cognitive performance and brain structure and function While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations and methodological innovations This Frontiers Research Topic will carve out new directions for the fields of exercise cognitive and social neurosciences We hope you will consider submitting your work **EMBEC & NBC 2017** Hannu Eskola,Outi Väisänen,Jari Viik,Jari Hyttinen,2017-06-12 This volume presents the proceedings of the joint conference of the European Medical and Biological Engineering Conference EMBEC and the Nordic Baltic Conference on Biomedical Engineering and Medical Physics NBC held in Tampere Finland in June 2017 The proceedings present all traditional biomedical engineering areas but also highlight new emerging fields such as tissue engineering bioinformatics biosensing neurotechnology additive manufacturing technologies for medicine and biology and bioimaging to name a few Moreover it emphasizes the role of education translational research and commercialization **QST. ,1954 Synopsis of Sleep Medicine** S. R.

Pandi-Perumal,2016-10-26 Sleep medicine encompasses an unusually board spectrum of contributions from biology technology and medicine This volume summarizes the considerable mass of knowledge that has been accumulated in the field and imparts its major findings in a manner that is comprehensive yet not overwhelming Edited by an eminent sleep researcher and with contributions from leading experts in the field the volume provides a basic grounding in sleep medicine and covers the fascinating complexity of the field It separates figure from ground for those who are newcomers to the field and who are seeking guideposts for further research Sleep problems are frequently co morbid with other medical conditions and clinicians need to be alert to this interconnectedness and to recognize which difficulties are primary and which are not Synopsis of Sleep Medicine will be a valuable tool for clinicians in many specialties for addressing diagnostic problems in sleep medicine The volume is the first of its kind rich yet comprehensive and focused and one that is sure to meet the needs of both basic and clinical research for some years to come **North Carolina State (NC EOG) Test Prep , 6th Grade ELA Practice Tests** Gowri Vemuri,2023-08-23 North Carolina State NC EOG Test Prep 6th Grade ELA Practice Tests Volume 1 Practice Questions and Explanations Full Length Online Practice Test **North Carolina(NC EOG) : 6th Grade ELA Test Prep : Weekly Practice Work Book , Volume 1** Math-Knots LLC,2023-07-28 **North Carolina(NC EOG) : 6th Grade ELA Test Prep : Weekly Practice Work Book , Volume 2** Math-Knots LLC,2023-07-28 **North Carolina Test Prep Practice Test Book End-of-grade Reading Comprehension Grade 6** Test Master Press North Carolina,2011-11-15 It s all new and updated for North Carolina s 2011 2012 End of Grade Reading Comprehension test This practice test book is the

perfect preparation tool for the EOG Reading Comprehension test.
