Rethinking Value-Added Models in Education Audrey Amrein-Beardsley,2014-04-24 Since passage of the of No Child Left Behind Act in 2001 academic researchers econometricians and statisticians have been exploring various analytical methods of documenting students academic progress over time Known as value added models VAMs these methods are meant to measure the value a teacher or school adds to student learning from one year to the next To date however there is very little evidence to support the trustworthiness of these models What is becoming increasingly evident yet often ignored mainly by policymakers is that VAMs are 1 unreliable 2 invalid 3 nontransparent 4 unfair 5 fraught with measurement errors and 6 being inappropriately used to make consequential decisions regarding such things as teacher pay retention and termination Unfortunately their unintended consequences are not fully recognized at this point either Given such the timeliness of this well researched and thoughtful book cannot be overstated This book sheds important light on the debate surrounding VAMs and thereby offers states and practitioners a highly important resource from which they can move forward in more research based ways

The Impact of Mentoring African American Middle Grade Males Linda W. Washington,2012-10-12 This insightful book gives suggestions on increasing academic rigor of the middle school male student increasing consistent student attendance and decreasing discipline referrals This book gives situational examples and possible suggestions to help single parents teachers administrators board members and the male student to overcome obstacles to be successful Washington believes that bonding should initially take place early in the relationship of the teacher to student and student to teacher Much like a client coming to a store for specific items the store owner has to get to know his customer in order to effectively serve this individual for continued customer satisfaction The same principles apply for teachers getting to know their students Oftentimes this notion is not developed because of constant new initiatives being introduced to teachers without lasting results Hence mentoring of students can eliminate many problems schools face Using the suggestions offered in this book will cause increase academic performance and attendance while decreasing discipline referrals tremendously
