

Standards for Mathematical Practice Posters

GRADE 6

I can make sense of problems & persevere in solving them.

When I am stuck, I can try a different approach, use a different tool, or ask for help. I can break a complex problem down into smaller parts and solve each part one at a time.

I can use appropriate tools strategically.

For those problems where I need to use a tool, I can choose the right tool for the job. I can use a ruler to measure, a protractor to draw angles, and a calculator to do calculations.

I can model with mathematics.

When I have a problem, I can draw a picture, make a table, or use a graph to help me solve it.

My model helps me understand the problem and find a solution.

I can reason abstractly and quantitatively.

$$3x + 10y = 18 \quad (2x + y)$$

If $x = 1$, then $3(1) + 10y = 18$
 $3 + 10y = 18$
 $10y = 15$
 $y = 1.5$
 So, when $x = 1$, $y = 1.5$.

I can construct viable arguments and critique the reasoning of others.

When I am asked to justify my answer, I can explain my thinking and provide evidence to support my claim.

When I hear someone else's argument, I can listen carefully and ask questions to clarify their reasoning.

I can attend to precision.

I can look for & make use of patterns & structures.

$$\begin{aligned} 100 &= 100 \times 1 = 100 \\ 100 &= 100 \times 10 = 1,000 \\ 100 &= 100 \times 100 = 10,000 \\ 100 &= 100 \times 1,000 = 100,000 \\ 100 &= 100 \times 10,000 = 1,000,000 \end{aligned}$$

This makes sense because...

I can look for and express regularity in repeated reasoning.

This will help me understand...
