Casagrande, Ramana V. Davuluri, 2010-04-06 view showing that multiple molecular pathways must be affected for cancer to develop but with different specific proteins in each pathway mutated or differentially expressed in a given tumor The Cancer Genome Atlas Research Network 2008 Parsons et al 2008 Different studies demonstrated that while widespread mutations exist in cancer not all mutations drive cancer development Lin et al 2007 This suggests a need to target only a deleterious subset of aberrant proteins since any treatment must aim to improve health to justify its potential side effects Treatment for cancer must become highly individualized focusing on the specific aberrant driver proteins in an individual This drives a need for informatics in cancer far beyond the need in other diseases For instance routine treatment with statins has become widespread for minimizing heart disease with most patients responding to standard doses Wilt et al 2004 In contrast standard treatment for cancer must become tailored to the molecular phenotype of an individual tumor with each patient receiving a different combination of therapeutics aimed at the specific aberrant proteins driving the cancer Tracking the aberrations that drive cancers identifying biomarkers unique to each individual for molecular level diagnosis and treatment response monitoring adverse events and complex dosing schedules and providing annotated molecular data for ongoing research to improve treatments comprise a major biomedical informatics need **Polysaccharide Materials** Kevin

Edgar, Thomas Heinze, Charles Buchanan, 2009 Today we are experiencing a renaissance in the chemistry of polysaccharide materials This is due in part to recognition of the importance of renewable based materials in a society in which petroleum has become a much more expensive feedstock with a cloudy future with respect to adequacy of supply There are currently intense global efforts to develop a biomass based refinery process intended to produce biofuel ethanol or butanol being the top candidates that will replace some or all of the petroleum based fuel we now use In parallel scientists and non scientists have become aware of the opportunities that this biofuel industry will create for biomass based products The utilization of waste from the biofuel process along with the exploitation of the collection system for biomass that will serve the biofuel production process to make other products from biomass will create an unprecedented and revolutionary opportunity for the

creation of integrated biorefineries These biorefineries will have substantial resemblance to current petroleum refineries in that they will convert a natural product or more properly products into fuel by chemical transformations and separation processes and simultaneously use co products and main products as feedstocks for the production of more complex chemicals In order to take advantage of the opportunities presented by a biorefinery based economy it is crucial that we develop new synthetic methods for polysaccharide derivatives and new understanding of the structure property performance relationships of these versatile molecules This symposium series book will describe new synthetic methods novel polysaccharide derivatives new applications of these derivatives in biomedicine and packaging applications and numerous examples of the creation of new insight into the design of polysaccharide materials for performance The articles in this symposium series book are good examples of the advances in polysaccharide chemistry being made in the current renaissance that will help to move us towards a biorefinery future
