**Advances in Cardiovascular Engineering** Ned H.C. Hwang, Vincent T. Turitto, Michael R.T. Yen, 2013-11-09 Advances of cardiovascular engineering prompt one to consider innovative device technology that is the development of new replacement heart valves or engineering of a totally implantable energy source for an artificial heart. However, these kinds of advances have often proved unable to achieve a long lasting benefit as the cardiovascular field has matured so fast. Cardiovascular engineering has matured to the point where a major innovation must not only function but must continuously function better than existing devices. This is difficult to accomplish in the complex cardiovascular system in which energy source, biocompatibility, compliance and functionality all must be considered. The maturation of the field is evident from the fact that many engineered prosthetic systems perform well for example heart valves function for long periods of time, large vessel vascular grafts are quite adequate, extracorporeal membrane oxygenation has significantly prolonged the feasible length of heart bypass and other surgical operations and total artificial hearts can be used as a bridge to transplant without serious complications yet none of these systems is as good as the natural ones it replaces. The reasons for this are many and incompletely understood. The next stage of progress must be better to alterations, understandings of the various components of vasculature and their response by our devices be they at the micro or macro circulatory levels in the blood or associated with the vascular wall.

*The Good Communist* Frank N. Pieke, 2009-11-05 Has China become just another capitalist country in a socialist cloak? Will the Chinese Communist Party survive the next ten years of modernization and globalization? Frank Pieke investigates these conundrums in this fascinating account of how government officials are trained for placement in the Chinese Communist Party. Through in depth interviews with staff members and aspiring trainees he shows that while the Chinese Communist Party has undergone a radical transformation since the revolutionary years under Mao it is still incumbent upon cadres who are selected through a highly rigorous process to be ideologically and politically committed to the party. It is the lessons learnt through their teachers that shape the political and economic decisions they will make in power. The book offers unique insights into the structure and the ideological culture of the Chinese government and how it has reinvented itself over the last three decades as a neo socialist state.
