1. When you walk along a floor, what pushes you along? **Ans. The floor pushes back on your feet.**
2. When you jump up, the world really does recoil downward. Why can't this motion of the world be noticed? **Ans. The world has such a large mass that its acceleration downwards is negligible.**
3. In the interaction between an apple and an orange, how many forces are exerted on the apple? **Ans. One. The orange pulling on the apple.** On the orange? **Ans. One, the apple pulling the orange.** Are these forces equal in strength? **Ans. Yes.** Are these forces opposite in direction? **Ans. Yes.**
4. How can a rocket be propelled above the atmosphere where there is no air to "push against"? **Ans. The rocket doesn't push against the air, the rocket pushes against the hot gases coming out of its thrusters. The hot gases push back propelling the rocket forward.**
5. In the interaction between a hammer and the nail it hits, is a force exerted on the nail? **Ans. Yes.** On the hammer? **Ans. Yes.** How many forces occur in this interaction? **Ans. Two forces, action and reaction.**
6. If the action is a bowstring acting on an arrow, identify the reaction force. **Ans. The arrow pushes back on the bowstring.**
7. When a hammer exerts a force on a nail, how does the amount of force compare with that of the nail on the hammer? **Ans. They are equal and opposite according to Newton's Third Law.**
8. When swimming, you push the water backward-call this action. What is the reaction force? **Ans. The water pushing you forward.**
9. When a rifle is fired, how does the size of the force of the rifle on the bullet compare with the force of the bullet on the rifle? **Ans. The forces are the same, equal and opposite.** How does the acceleration of the rifle compare with that of the bullet? Defend your answer. **Ans. The rifle will recoil backwards with less acceleration because it has a larger mass.  $F = M \cdot a$**

*Medical Education in Pulmonary, Critical Care, and Sleep Medicine* Patricia A. Kritek, Jeremy B. Richards, 2019-05-14 This is a book for clinician educators. It offers modern evidence based practices to use in teaching learners at a range of levels with an emphasis on concrete strategies that teachers can implement in their own clinical practices as well as in small and large group settings. Medical education is rapidly changing with emerging evidence on best practices and a proliferation of new technologies. As strategies for effectively teaching medical learners evolve, it is important to understand the implications for Pulmonary Critical Care and Sleep Medicine. PCCM This text is structured to allow easy access to the reader. Chapters are organized around level of learner e.g. medical student to PCCM fellow to practicing physicians as well as the location of teaching. Given the variety of clinical settings in which PCCM physicians teach, specific consideration of best practices, broad changes in curricular design and pedagogy are considered in different clinical contexts. Each chapter begins with a focus on why the topic is important for clinician educators. A review of the available evidence and relevant medical education theory about the topic follows with examples from specific studies that provide insight into best practices regarding the concepts and topics discussed in the chapter. For chapters focusing on learners different environments are considered and similarly if the focus is on the learning environment, attention is paid to the approach to different learners. Each chapter ends with a summary of the primary points from the chapter and concrete examples of how clinician teachers can put the concepts discussed in the chapter into practice. This is an ideal guide for educators in pulmonary critical care and sleep medicine.

**Design Recommendations for Intelligent Tutoring System - Volume 5: Assessment Methods** Dr. Robert Sottilare, Dr. Arthur Graesser, Dr. Xiangen Hu, Dr. Gregory Goodwin, 2017-08-28 This book is the fifth in a planned series of books that examine key topics e.g. learner modeling, instructional strategies, authoring domain modeling, assessment impact on learning, team tutoring, machine learning, and potential standards in intelligent tutoring system (ITS) design through the lens of the Generalized Intelligent Framework for Tutoring (GIFT). Sottilare, Brawner, Goldberg, Sottilare, Brawner, Sinatra, Johnston, 2017. GIFT is a modular, service-oriented architecture created to reduce the cost and skill required to author ITSs, manage instruction within ITSs, and evaluate the effect of ITS technologies on learning performance, retention, transfer of skills, and other instructional outcomes. Along with this volume, the first four books in this series (Learner Modeling, ISBN 978-0-9893923-0-3; Instructional Management, ISBN 978-0-9893923-2-7; Authoring Tools, ISBN 978-0-9893923-6-5; and Domain Modeling, ISBN 978-0-9893923-9-6) are freely available at [www.GIFTtutoring.org](http://www.GIFTtutoring.org) and on Google Play.

[Chatgpt and Other Generative AI Tools](#) Jochen Kuhn, Stefan Küchemann, Knut Neumann, Martina Rau, 2025-02-17 In the past ten years, applications of generative artificial intelligence (GAI) have found rapidly growing use in medicine, science, and daily life. Large language models (LLMs) have opened up new avenues, in particular for education. LLMs have been used to create interactive educational content for students, stimulate their curiosity, generate code explanations, and

develop assessment questions Additionally LLMs have been applied for language practice anxiety alleviation and feedback provision In higher education LLMs have shown potential for assisting in medical exam preparation and clinical decision making In school education LLMs can help teachers with automated evaluation of student responses and respective adaptive feedback More recently LLM based applications such as chatGPT have been used to generate teaching materials or assessment tasks across different subjects The fields understanding of the effects of the use of LLM based applications in classroom teaching however is still in its infancy GAI tools may help solving a range of tasks in education in particular with respect to teachers and students and teachers efforts to generate content However it is critical that teachers and students do not overly rely on GAI generated solutions but instead critically assess each solution Students should furthermore not use GAI tools to avoid investing relevant mental effort to create mental models or more broadly build up competencies
