Ecophysiology of root systems-environment interaction Boris Rewald, Omer Falik, Douglas Godbold, Shimon Rachmilevitch, 2014-09-03 There is a scarcity of detailed information regarding the ecophysiology of root systems and the way root system functioning is affected by both internal and external factors Furthermore global climate change is expected to increase the intensity of climate extremes such as severe drought heat waves and periods of heavy rainfall in addition other stresses such as salinization of soils are increasing world wide Recently an increasing awareness has developed that understanding plant traits will play a major role in breeding of future crop plants For example there is increasing evidence that the traits of root systems are defined by the properties of individual roots However further knowledge on the functional importance of root segments and the molecular physiological mechanisms underlying root system functioning and persistence is needed and would specifically allow modifying crop root system functionality and efficiency in the future Another major gap in knowledge is localized at the root soil interface and in regard to the potential adaptive plasticity of root rhizosphere interactions under abiotic stress and or competition It is currently unknown whether adaptations in microbe communities occur for example due to modified exudation rates and what are the subsequent influences on nutrient mobilization and uptake Furthermore uncovering the mechanisms by which roots perceive neighboring roots may not only contribute to our understanding of plant developmental strategies but also has important implications on the study of competitive interactions in natural communities and in optimizing plant performance and resource use in agricultural and silvicultural systems In this Research Topic we aimed to provide an on line open access snapshot of the current state of the art of the field of root ecology and physiology with special focus on the translation of root structure to function and how root systems are influenced by interplay with internal and external factors such as abiotic stress microbes and plant plant interaction We welcomed original research papers but reviews of specific topics articles formulating opinions or describing cutting edge methods were also gladly accepted

China's Avant-Garde, 1978-2018 Daria Berg, Giorgio Strafella, 2022-11-11 This book examines how China's new generation of avant garde writers and artists are pushing the boundaries of vernacular culture creatively appropriating artistic and literary languages from global cultures to reflect on reform era China's transformation and the Maoist heritage It explores the vortex of cultural change from the

launch of Deng Xiaoping's reforms in 1978 to Xi Jinping establishing his leadership for life in 2018 The book argues that China's new avant garde adopt transcultural forms of expression while challenging the official discourse of Xi Jinping's regime which promotes cultural nationalism and demands that cultural production in China embodies the essence of the Chinese nation The topics range from body art women's poetry and boys love literature to Tibetan fiction and ceramic art The book shows how the avant garde use the new digital media to bypass government censorship transcending China's virtual frontiers while breaking new ground for an emerging public sphere Overall the book provides a rich picture of the nature of China's avant garde art and literature and the challenges it poses for the Chinese government The introduction and chapter 10 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

China's Influence on Non-Trade Concerns in International Economic Law Paolo Farah, Elena Cima, 2016-10-14 This volume examines the range of Non Trade Concerns NTCs that may conflict with international economic rules and proposes ways to protect them within international law and international economic law Globalization without local concerns can endanger relevant issues such as good governance human rights right to water right to food social economic cultural and environmental rights labor rights access to knowledge public health social welfare consumer interests and animal welfare climate change energy environmental protection and sustainable development product safety food safety and security Focusing on China the book shows the current trends of Chinese law and policy towards international standards The authors argue that China can play a leading role in this context not only has China adopted several reforms and new regulations to address NTCs but it has started to play a very relevant role in international negotiations on NTCs such as climate change energy and culture among others While China is still considered a developing country in particular from the NTCs point of view it promises to be a key actor in international law in general and more specifically in international economic law in this respect This volume assesses taking into consideration its special context China's behavior internally and externally to understand its role and influence in shaping NTCs in the context of international economic law
