Question 1

In the following human pedigrees, the filled symbols represent the affected individuals. You may assume that the disease allele is rare and therefore individuals marrying into the family are unlikely to have defective allele.

Pedigree A

The parents in the red circle are how you know the trait is dominant because they are not afflicted. Remember the afflicted trait is shaded in. The first generation must have both alleles because they are present in next generation

i) What is the most likely mode of inheritance for this pedigree?

The most likely mode of inheritance is autosomal dominant.

iii) If individuals #2 and #3 have another son what are the chances that this son will be affected?

Individual	Genotype
#1	<i>aa</i>
#3	<i>aa</i>
