Zdenek Hubálek, Ivo Rudolf, 2010-11-25 This book presents the state of art in the field of microbial zoonoses and sapronoses. It could be used as a textbook or manual in microbiology and medical zoology for students of human and veterinary medicine including Ph D students and for biomedicine scientists and medical practitioners and specialists as well. Surprisingly severe zoonoses and sapronoses still appear that are either entirely new e.g. SARS, newly recognized Lyme borreliosis, resurging West Nile fever in Europe, increasing in incidence campylobacteriosis, spatially expanding West Nile fever in the Americas with a changing range of hosts and/or vectors, with changing clinical manifestations or acquiring antibiotic resistance. The collective term for those diseases is re-emerging infections and most of them represent zoonoses and sapronoses, the rest are anthroponoses. The number of known zoonotic and sapronotic pathogens of humans is continually growing over 800 today. In the introductory part short characteristics are given of infectious and epidemic process including the role of environmental factors, possibilities of their epidemiological surveillance and control. Much emphasis is laid on ecological aspects of these diseases, haematophagous vectors and their life history, vertebrate hosts of zoonoses, habitats of the agents and their geographic distribution, natural focality of diseases. Particular zoonoses and sapronoses are then characterized in the following brief paragraphs: source of human infection, animal disease transmission mode, human disease epidemiology, diagnostics, therapy, geographic distribution.
