*Psychology and Mathematics Education* Gila Hanna,Laura Macchi,Karin Binder,Laura Martignon,Katharina Loibl,2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and

probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather sacrifice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

*Reasoning, Rationality and Dual Processes* Jonathan Evans,2013-10-30 In the World Library of Psychologists series international experts themselves present career long collections of what they judge to be their finest pieces extracts from books key articles salient research findings and their major theoretical and practical contributions Jonathan St B T Evans is amongst the foremost cognitive psychologists of his generation having been influential in spearheading developments in the psychological study of reasoning from its very beginnings in the 1970s up to the present day This volume of self selected papers recognises Professor Evans s major contribution to the psychological study of thinking and reasoning by bringing together his most influential and important works Early selections in the book focus upon experimental studies of reasoning matching bias in the Wason selection task belief bias in syllogistic reasoning and also seminal work on the understanding of conditional statements The later selections include Evans work on more general forms of dual process and dual system theory and his recent account of two minds in one brain The volume also contains chapters which highlight Evans contribution to the topic of human rationality and also his influence on the development of the new paradigm in the psychology of reasoning The key developments in the psychology of reasoning are paralleled by those in Evans s own intellectual history and the book will therefore make essential reading for all researchers in the psychology of reasoning and a wider audience of graduate and upper level undergraduate students with an interest in reasoning and or dual process theory

**Routledge Handbook of Bounded Rationality** Riccardo Viale,2020-12-02 Herbert Simon s renowned theory of bounded rationality is principally interested in cognitive constraints and environmental factors and influences which prevent people from thinking or behaving according to formal rationality Simon s theory has been expanded in numerous directions and taken up by various disciplines with an interest in how humans think and behave This includes philosophy psychology neurocognitive sciences economics political science sociology management and organization studies The Routledge Handbook of Bounded Rationality draws together an international team of leading experts to survey the recent literature and the latest developments in these related fields The chapters feature

entries on key behavioural phenomena including reasoning judgement decision making uncertainty risk heuristics and biases and fast and frugal heuristics The text also examines current ideas such as fast and slow thinking nudge ecological rationality evolutionary psychology embodied cognition and neurophilosophy Overall the volume serves to provide the most complete state of the art collection on bounded rationality available This book is essential reading for students and scholars of economics psychology neurocognitive sciences political sciences and philosophy     *Cognition* Thomas A. Farmer, Margaret W. Matlin, 2020-05-07 The study of human cognitive processes provides insight into why we act or react and can help us predict future behaviors In *Cognition* authors Thomas Farmer and Margaret Matlin present an engaging and highly relatable examination of how these processes work and how they are responsible for the way we perceive and interpret the world around us Broad in scope without sacrificing depth of detail this text emphasizes the link between conceptual cognitive psychology and real world experience case studies current trends and historical perspectives merge to provide a comprehensive understanding of core principles and theories This new Tenth Edition has been updated to reflect the latest research technology and thinking with more in depth coverage of topics rising to prominence in the field s current knowledge base Expanded explanations balance classical and contemporary approaches to specific topics while additional experiments and an emphasis on methodology and experimental design are included to facilitate a greater appreciation of the field s rigorous research     Forthcoming Books Rose Arny, 2001
