**Non-pharmacological Interventions for Mental Disorders** Lara Guedes De Pinho, César Fonseca, Manuel Lopes, Brooke Schneider, Łukasz Gawęda, 2024-04-01 One of the side effects of the COVID-19 pandemic was the worsening of the symptomatology of mental disorders. The number of people with mental disorders has increased and pre-existing mental disorders have worsened in many cases. Psychopharmacology alone is not sufficient for the treatment of conditions such as schizophrenia, depression, bipolar disorder and generalized anxiety disorder among others, and the combined use of psychopharmacology and non-pharmacological interventions is recommended by international guidelines. Despite this, most people around the world do not have access to non-pharmacological interventions, and when they are diagnosed with a mental disorder, only psychopharmacological drugs are prescribed. In other cases, although non-pharmacological interventions, for example, psychotherapy, are also prescribed, this response takes a long time.
