Interference Mitigation and Energy Management in 5G Heterogeneous Cellular Networks Yang, Chungang,Li, Jiandong,2016-11-22 In recent years wireless networks have become more ubiquitous and integrated into everyday life As such it is increasingly imperative to research new methods to boost cost effectiveness for spectrum and energy efficiency

Interference Mitigation and Energy Management in 5G Heterogeneous Cellular Networks is a pivotal reference source for the latest research on emerging network architectures and mitigation technology to enhance cellular network performance and dependency Featuring extensive coverage across a range of relevant perspectives and topics such as interference alignment resource allocation and high speed mobile environments this book is ideally designed for engineers professionals practitioners upper level students and academics seeking current research on interference and energy management for 5G heterogeneous cellular networks *ECGBL2014-8th European Conference on Games Based Learning* Carsten Busch,2014-11-11 Cyber-Physical Systems: Architecture, Security and Application Song Guo,Deze Zeng,2018-09-20 This book provides an overview of recent innovations and achievements in the broad areas of cyber physical systems CPS including architecture networking systems applications security and privacy The book discusses various new CPS technologies from diverse aspects to enable higher level of innovation towards intelligent life The book provides insight to the future integration coordination and interaction between the physical world the information world and human beings The book features contributions from renowned researchers and engineers who discuss key issues from various perspectives presenting opinions and recent CPS related achievements Investigates how to advance the development of cyber physical systems Provides a joint consideration of other newly emerged technologies and concepts in relation to CPS like cloud computing big data fog computing and crowd sourcing Includes topics related to CPS such as architecture system networking application algorithm security and privacy **Enabling Technologies for Very Large-Scale Synaptic Electronics** Themis Prodromakis,Alexantrou Serb,2018-07-05 An important part of the colossal effort associated with the understanding of the brain involves using electronics hardware technology in order to reproduce biological behavior in silico The idea revolves around leveraging decades of experience in the electronics industry as well as new biological findings that are employed towards reproducing key behaviors of fundamental elements of the brain notably neurons and synapses at far greater speed scale products than any software only implementation can achieve for the given level of modelling detail So far the field of neuromorphic engineering has proven itself as a major source of innovation towards the silicon brain goal with the methods employed by its community largely focused on circuit design analogue digital and mixed signal and standard commercial Complementary Metal Oxide Silicon CMOS technology as the preferred tools of choice when trying to simulate or emulate biological behavior However alongside the circuit oriented sector of the community there exists another community developing new electronic technologies with the express aim of creating advanced devices beyond the capabilities of CMOS that can intrinsically simulate neuron or synapse like behavior A notable example concerns nanoelectronic devices responding to well defined input signals by suitably changing their internal state weight thereby exhibiting synapse like plasticity This is in stark contrast to circuit oriented approaches where the synaptic weight variable has to be first stored typically as charge on a capacitor or digitally and then appropriately changed via complicated circuitry The shift of very

much complexity from circuitry to devices could potentially be a major enabling factor for very large scale synaptic electronics particularly if the new devices can be operated at much lower power budgets than their corresponding traditional circuit replacements To bring this promise to fruition synergy between the well established practices of the circuit oriented approach and the vastness of possibilities opened by the advent of novel nanoelectronic devices with rich internal dynamics is absolutely essential and will create the opportunity for radical innovation in both fields The result of such synergy can be of potentially staggering impact to the progress of our efforts to both simulate the brain and ultimately understand it In this Research Topic we wish to provide an overview of what constitutes state of the art in terms of enabling technologies for very large scale synaptic electronics with particular stress on innovative nanoelectronic devices and circuit system design techniques that can facilitate the development of very large scale brain inspired electronic systems   <u>Data Driven Approach Towards Disruptive Technologies</u> T P Singh,Ravi Tomar,Tanupriya Choudhury,Thinagaran Perumal,Hussain Falih Mahdi,2021-04-06 This book is a compilation of peer reviewed papers presented at the International Conference on Machine Intelligence and Data Science Applications organized by the School of Computer Science University of Petroleum Energy Studies Dehradun India during 4 5 September 2020 The book addresses the algorithmic aspect of machine intelligence which includes the framework and optimization of various states of algorithms Variety of papers related to wide applications in various fields like data driven industrial IoT bioinformatics network and security autonomous computing and various other aligned areas The book concludes with interdisciplinary applications like legal health care smart society cyber physical system and smart agriculture All papers have been carefully reviewed The book is of interest to computer science engineers lecturers researchers in machine intelligence discipline and engineering graduates   **Memoirs of the Institute of Scientific and Industrial Research, Osaka University** Ōsaka Daigaku. Vasilakos,Qun Jin,Hongbo Zhu,2017-07-12 D2D based proximity service is a very hot topic with great commercial potential from an application standpoint Unlike existing books which focus on D2D communications technologies this book fills a gap by summarizing and analyzing the latest applications and research results in academic industrial fields and standardization The authors present the architecture fundamental issues and applications in a D2D networking environment from both application and interdisciplinary points of view   *Ethics and Trust. A Literature Review on Cloud Computing Services* Anna Lena Bischoff,2017-03-01 Seminar paper from the year 2017 in the subject Business economics Offline Marketing and Online Marketing grade 1 7 Linneaus University School of Business and Economics course Contemporary Marketing language English abstract Even though security issues when using cloud computing services have been looked at from a technical perspective research has failed to explain why consumers use cloud services extensively despite their distrust Observations have been made that users are in a dilemma where they use a service they are not comfortable with Besides trust the ethical perspective of all stakeholders in cloud computing has not been discussed or connected to the issue of trust The unease consumers feel when signing up for a cloud service could be transformed from a dilemma into a competitive advantage Therefore it is of high interest to cloud service providers to understand how they can gain competitive advantage over competitors by building consumer relationships based on trust and ethical norms The results of this literature review show that making use of insights into cloud computing issues and awareness for trustful ethical relationships with the customer service providers can create competitive advantage Following ethical norms and building trust with customers enables companies to gain first mover advantages in the field of cloud computing services They can successfully distance themselves from competitors by promoting marketing campaigns that emphasize their high ethical standards and treatment of users This paper adds the dimension of ethics to the dilemma of mistrust in cloud computing exploring whether this is a key influence on consumer trust since there was a research gap discovered in researching a trustful provide user relationship as well as an ethical perspective in cloud computing
