controlled trials investigating B vitamin supplementation as a cognitive enhancer in the elderly have provided inconclusive evidence as to the benefits of such therapy for dementia. In fact, the nutritional underpinnings of Alzheimer's disease and other disorders of cognitive ageing is becoming a much researched topic. In addition, consumption of several other foods has been found to convey more acute cognitively enhancing effects. For example, ingestion of carbohydrates e.g. glucose, caffeine, resveratrol and several nutraceutical/herbal extracts has been associated with short-term improvements in cognitive performance. Beyond specific micronutrients and macronutrients, the current literature seems to support anecdotal evidence that consumption of a balanced breakfast is crucial to various measures of school performance, including attention in the classroom. What is clear from this emerging literature is that the relationship between nutritional status and neurocognitive functioning at various stages of the lifespan is complex. An aim of this Research Topic is to bring together some recent empirical findings, reviews and commentaries of the literature to date and opinion pieces relating to future directions for this burgeoning field. Complex Problem Solving Beyond the Psychometric Approach Wolfgang Schoppek, Joachim Funke, Magda Osman, Annette Kluge, 2018-09-28. Complex problem solving (CPS) and related topics such as dynamic decision making (DDM) and complex dynamic control (CDC) represent multifaceted psychological phenomena. In a broad sense, CPS encompasses learning, decision making and acting in complex and dynamic situations. Moreover, solutions to problems that people face in such situations are often generated in teams or groups. This adds another layer of complexity to the situation itself because of the emerging issues that arise from the social dynamics of group interactions. This framing of CPS means that it is not a single construct that can be measured by using a particular type of CPS task e.g. minimal complex system tests, which is a view taken by the psychometric community. The proposed approach taken here is that because CPS is multifaceted, multiple approaches need to be taken to fully capture and understand what it is and how the different cognitive processes associated with it complement each other. Thus, this Research Topic is aimed at showcasing the latest work in the fields of CPS as well as DDM and CDC that takes a holistic approach to investigating and theorizing about these abilities. The collection of articles encompasses conceptual approaches as well as experimental and correlational studies involving established or new tools to examine CPS, DDM and CDC. This work contributes to answering questions about what strategies and what general knowledge can be transferred from one type of complex and dynamic situation to another, what learning conditions result in transferable knowledge and skills, and how these features can be trained. **El-Hi Textbooks in Print**, 1981

Measurement Models for Psychological Attributes Klaas Sijtsma, L. Andries van der Ark, 2020-10-22. Despite the overwhelming use of tests and questionnaires, the psychometric models for constructing these instruments are often poorly understood, leading to suboptimal measurement. *Measurement Models for Psychological Attributes* is a comprehensive and accessible treatment of the common and the less than common measurement models for the social, behavioral and health sciences. The monograph

explains the adequate use of measurement models for test construction points out their merits and drawbacks and critically discusses topics that have raised and continue to raise controversy Because introductory texts on statistics and psychometrics are sufficient to understand its content the monograph may be used in advanced courses on applied psychometrics and is attractive to both researchers and graduate students in psychology education sociology political science medicine and marketing policy research and opinion research The monograph provides an in depth discussion of classical test theory and factor models in Chapter 2 nonparametric and parametric item response theory in Chapter 3 and Chapter 4 respectively latent class models and cognitive diagnosis models in Chapter 5 and discusses pairwise comparison models proximity models response time models and network psychometrics in Chapter 6 The chapters start with the theory and methods of the measurement model and conclude with a real data example illustrating the measurement model

The Resegregation of Schools Jamel K. Donnor, Adrienne Dixson, 2013-06-07 Access to a quality education remains the primary mechanism for improving one's life chances in the United States and for children of color a good education is particularly linked to their individual and collective well being Despite the popular perception that America is in a post racial epoch opportunities to access quality learning environments and human development resources remain determined according to race class gender and ability Taking a more nuanced approach to race and the resegregation of the American school system this volume examines how and why the education quality for the majority of students of color in America remains fundamentally unequal
