Conservation Strategy

Objectives

Conservation: Describe the goals of conservation biology and the particular challenges of managing biodiversity in the Florida Keys.

The Biodiversity & Ecosystem Resilience

22.1 Describe the three greatest threats to biodiversity.

22.2 Explain why biodiversity is vital for human welfare. Explain why managing it well is important for humans.

22.3 Explain how conservation, ecology, and management of resources support life on Earth.

22.4 Explain the need for conservation of global warming.

The Geographic Distribution of Biodiversity

22.5 Explain why biodiversity is greatest in tropical latitudes. Explain the significance of biodiversity hotspots.

Conservation of Populations and Species

22.6 Distinguish between endangered species and threatened species. Compare the conservation approach to the declining population approach in the study of endangered populations.

22.7 Explain why the effects of even the smallest-scale disturbance from humans can be good or bad for those concerned areas.

22.8 Describe the problems that faced the first conservation organizations. Give a perspective on why wildlife helped an ecological shift needed to be done.

Managing and Restoring Ecosystems

22.9 Describe the goals of landscape ecology and wetlands.

22.10 Describe the importance of edges and corridors in relation to biodiversity.

22.11 Explain how ecosystem ecology, including geomorphology and hydrogeology of wetland systems is used to assess physical conditions to plan natural ecological plans.

22.12 Explain why sustainable development is the ultimate goal for the long-term sustainability of human welfare and the resources that support them.

Conservation: Saving the Species

22.1 Review the human conservation of habitat and conservation efforts.

1. The late 19th and early 20th centuries were periods of rapid population growth in the early 19th century. Many conservation efforts were initiated in the late 19th century.
2. Conservation efforts brought the population of birds down to about 10% of the early 19th century. The late 19th century saw a rise in the late 19th century. The late 19th century saw a rise in the late 19th century.

Species Concepts in Biology Frank E. Zachos, 2016-10-05 Frank E Zachos offers a comprehensive review of one of today's most important and contentious issues in biology the species problem After setting the stage with key background information on the topic the book provides a brief history of species concepts from antiquity to the Modern Synthesis followed by a discussion of the ontological status of species with a focus on the individuality thesis and potential means of reconciling it with other philosophical approaches More than 30 different species concepts found in the literature are presented in an annotated list and the most important ones including the Biological Genetic Evolutionary and different versions of the Phylogenetic Species Concept are discussed in more detail Specific questions addressed include the problem of asexual and prokaryotic species intraspecific categories like subspecies and Evolutionarily Significant Units and a potential solution to the species problem based on a hierarchical approach that distinguishes between ontological and operational species concepts A full chapter is dedicated to the challenge of delimiting species by means of a discrete taxonomy in a continuous world of inherently fuzzy boundaries Further the book outlines the practical ramifications for ecology and evolutionary biology of how we define the species category highlighting the danger of an apples and oranges problem if what we subsume under the same name species is in actuality a variety of different entities A succinct summary chapter glossary and annotated list of references round out the coverage making the book essential reading for all biologists looking for an accessible introduction to the historical philosophical and practical dimensions of the species problem
