

ASQ:SE-2™ Quick Start Guide

Use this ASQ:SE-2™ Quick Start Guide to improve screening implementation using the Ages & Stages Questionnaire: Social Emotional, Second Edition (ASQ:SE-2™): A Parent-Completed Child Monitoring System for Social Emotional Behaviors.

ASQ:SE-2™ is a reliable, parent-completed tool used to screen social-emotional development in children from 1 to 72 months. There are nine questionnaires for parents or primary caregivers to complete at different ages, referred to as "intervals." ASQ:SE-2 items address a child's behaviors in seven areas (see pages 30–31 in the ASQ:SE-2™ User's Guide for more information):

- **Self-regulation:** Calming, settling down, or adjusting to physiological or environmental conditions or stimulation
- **Compliance:** Conforming to others' directions and following rules
- **Adaptive functioning:** Coping with physiological needs (e.g., sleeping, eating, elimination, safety)
- **Autonomy:** Self-initiation or responding without guidance (i.e., moving to independence)
- **Affect:** Demonstrating feelings and empathy for others
- **Social-communication:** Interacting with others by responding to or initiating signals to indicate interests, needs, and feelings
- **Interaction with people:** Responding to or initiating social responses to parents, other adults, and peers

SELECT THE CORRECT QUESTIONNAIRE

Age ranges are clearly indicated at the top of the family information sheet, the first page of the questionnaire, and the Information Summary sheet. Do the following to select the correct questionnaire:

1. **Confirm what the child's exact age will be in months and days at the time of screening.** Use the free online age calculator available at www.agesandstages.com. The following are examples that illustrate calculating a child's age by hand.

Subtract the child's date of birth from the date completed.

Example 1: This child is 4 years, 6 months, and 15 days—or 54 months and 15 days.

| | Year | Month | Day |
|---------------------|---------|----------|---------|
| Administration date | 2015 | 10 | 30 |
| Date of birth | 2011 | 4 | 15 |
| Age of child | 4 years | 6 months | 15 days |

Example 2: This child's is 11 months and 10 days.

| | Year | Month | Day |
|---------------------|---------|--------------------|------------------|
| Administration date | 2014 | 20 (8 + 12 months) | 25 (5 + 20 days) |
| Date of birth | 2014 | 9 | 5 |
| Age of child | 0 years | 11 months | 10 days |

development and learning are described to provide a theoretical system for a scientific method of management. Commonly used assessment procedures from such professionals as psychologists and speech and language clinicians are examined in addition to providing information on developmental screening and early intervention. The second section of the book provides specific information about the most common developmental and learning disorders likely to be seen by the primary care clinician. Each chapter has been revised to include the most recent information available, particularly for attention deficit hyperactivity disorder. Several chapters have been added to cover some additional common causes of mental retardation. Key Features: Chapters are organized by definitions, etiologies, and pathophysiologies; assessments and findings; management and outcomes. Content has been updated and revised to include the most recent information available on disorders of development and learning. Accompanying CD ROM features the complete text and illustrations in fully searchable PDF files and is ideal for presentations and patient education.

Comparative Evaluation of Rating Scales for Clinical Psychopharmacology H. van Riezen, Mark Segal, 1988. This book provides a detailed description of all assessment scales used for the evaluation of drugs within the framework of psychiatry. It compares their relative merits and presents a procedure for making optimal choices for use in clinical experiments. Moreover, it discusses protocol design and quality control of clinical trials. Psychiatrist, nurse, and self-assessment scales for studies in anxiety, depression, schizophrenia, mania, and dementia are fully described. Comparative Evaluation of Rating Scales in Clinical Psychopharmacology is aimed at all those in industry, university, private hospital, and/or private practice who concern themselves with clinical trials of psychoactive drugs.
