Summary

Chapter 1 begins with a “Big Picture” overview of our place in the Universe. This is followed by a brief introduction to the science of Astronomy and the definition of “Universe.” Common units of measurement that are important to astronomers are introduced, along with the convention of scientific notation. Section 1.2 discusses the scientific method, giving the students an understanding of some of the differences between science and pseudoscience or non-science ways of knowing such as religion. Section 1.3 introduces constellations and the celestial sphere, which serve as a springboard to descriptions in Section 1.4 of the apparent daily and annual motions of celestial bodies such as the Sun, Moon, and stars. Most of these motions are actually illusory, caused by various motions of the Earth. Section 1.4 also explains the nature and cause of the Earth’s seasons. Section 1.5 deals with the relationship between the Earth and the Moon that causes the phases of the Moon as well as solar and lunar eclipses. Chapter 1 concludes with the concept of parallax and its use in performing measurements of distance and size.
