*Dynamic Networks and Evolutionary Variational Inequalities* Patrizia Daniele, 2006 This book offers a comprehensive analysis of dynamic networks and evolutionary variational inequalities a topic of growing prominence in the study of networks. The extraordinary importance of networks in finance mathematics computer science and other areas is well known but the relatively new concept of dynamic networks is less well understood. They become dynamic when the constitutive elements of the phenomena associated with the fixed geometry of networks are considered to be evolving over time. Patrizia Daniele offers many numerical examples to illustrate the issues discussed and provides a broad appendix to enrich this challenging but deeply informative book. Researchers students and practitioners in the areas of finance economics computer science and mathematics will find this volume an indispensable resource in understanding the use and development of networks in their disciplines

*Feasible Mathematics II* Peter Clote, Jeffrey B. Remmel, 2013-03-13 Perspicuity is part of proof. If the process by means of which I get a result were not surveyable I might indeed make a note that this number is what comes out but what fact is this supposed to confirm for me I don't know what is supposed to come out 1 L Wittgenstein A feasible computation uses small resources on an abstract computation device such as a Turing machine or boolean circuit. Feasible mathematics concerns the study of feasible computations using combinatorics and logic as well as the study of feasibly presented mathematical structures such as groups algebras and so on. This volume contains contributions to feasible mathematics in three areas computational complexity theory proof theory and algebra with substantial overlap between different fields. In computational complexity theory the polynomial time hierarchy is characterized without the introduction of runtime bounds by the closure of certain initial functions under safe composition predicative recursion on notation and unbounded minimization S Bellantoni an alternative way of looking at NP problems is introduced which focuses on which parameters of the problem are the cause of its computational complexity and completeness density and separation collapse results are given for a structure theory for parametrized problems R Downey and M Fellows new characterizations of PTIME and LINEAR SPACE are given using predicative recurrence over all finite tiers of certain stratified free algebras D
