*Title List of Documents Made Publicly Available* U.S. Nuclear Regulatory Commission, 1980. *The Application of Multi-omics Analysis in Translational Medicine* HaiHui Huang, Madhu Chetty, 2026-01-06. Multi-omics analysis has emerged as a powerful approach in translational medicine, integrating diverse molecular data to provide a comprehensive understanding of biological systems and disease mechanisms. This Research Topic aims to explore the latest advancements and applications of multi-omics analysis in bridging the gap between basic research and clinical practice. In recent years, technological breakthroughs have enabled the simultaneous profiling of multiple molecular layers, including genomics, transcriptomics, proteomics, metabolomics, and epigenomics. The integration of these diverse data types offers unprecedented insights into complex biological processes and disease pathogenesis. Translational medicine seeks to leverage these insights to improve patient outcomes through more precise diagnostics, prognostics, and therapeutic strategies. Despite the potential of multi-omics approaches, several challenges persist in their application to translational medicine. These include data integration and interpretation, handling high-dimensional datasets, identifying clinically relevant biomarkers, and translating molecular findings into actionable clinical insights. Additionally, standardization of multi-omics protocols, data analysis pipelines, and reporting methods is crucial for reproducibility and clinical implementation. This Research Topic will address these challenges and explore innovative solutions in the field of multi-omics analysis for translational medicine. We welcome contributions that advance our understanding of multi-omics applications in various aspects of healthcare and biomedical research. Themes of interest include but are not limited to:

1. Novel computational methods for integrating multi-omics data
2. Machine learning and artificial intelligence approaches in multi-omics analysis
