

Biology Unit 1 - Notes

1.1 - Cell Theory

living organisms are composed of cells

Cells are the fundamental building blocks of all living organisms

The smallest organisms are unicellular
as they consist of one cell

Larger organisms are multicellular
as they are composed of many cells

Common Features

- every living cell is surrounded by a membrane
which separates the cell contents from everything else from outside
- cells contain genetic material which stores all of the instructions needed for the cell's activities.
- many of these activities are chemical reactions, catalyzed by enzymes produced inside the cell.
- cells have their own energy release system that powers all of the cell's activities

Cell Theory

- Cells are the smallest unit of life
- All living things are composed of cells
- Cells only come from pre-existing cells

Magnification = $\frac{\text{image size}}{\text{actual size}}$

Cell Theory's exceptions

① Striated Muscle

they are much larger than most animal cells

② Ascomycete Fungi

Fungi consist of narrow thread-like structures called hyphae

In some types of fungi, the hyphae are divided into small cell walls called septa.

Each hypha is an uninterrupted tube-like structure with many nuclei spread along it.

Challenger the idea that living structures are composed of discrete cells (individual, separate entities)

Some fungi are not partitioned by septa & hence have a continuous cytoplasm along the length of the hyphae
