

Chapter 3 States of Matter

Section 3.1 Solids, Liquids, and Gases**(pages 68–73)**

This section explains how materials are classified as solids, liquids, or gases. It also describes the behavior of these three states of matter.

Reading Strategy (page 68)

Comparing and Contrasting As you read about the states of matter, replace each letter in the diagram below with one of these phrases: definite volume, definite shape, variable volume, or variable shape. For more information on this Reading Strategy, see the **Reading and Study Skills** in the **Skills and Reference Handbook** at the end of your textbook.

**Describing the States of Matter (pages 68–73)**

- What are the three common states of matter?
a. solids b. liquids c. gases
- Is the following sentence true or false? The fact that a copper wire can be bent shows that some solids do not have a definite shape.
True
- Circle the letter of each phrase that describes how particles at the atomic level are arranged within most solids.
a. randomly arranged ☒ b. packed close together
☒ c. arranged in a regular pattern d. spread far apart
- Is the following sentence true or false? A liquid takes the shape of its container. True
- What is the state of matter in which a material has neither a definite shape nor a definite volume? gas
- Compare and contrast the arrangement of particles at the atomic level for a liquid and a solid. Particles in a solid are packed close together in an orderly arrangement. The arrangement of particles in a liquid is more random.
- What determines the shape and volume of a gas? A gas takes the shape and volume of its container.
- On the sun, where temperatures are extremely high, matter exists in a state known as plasma.

Application of the Concept of Exemption IAEA,2023-11-15 Intended for use by government officials and those working for regulatory bodies and operating organizations this publication will assist in the application of IAEA Safety Standards Series No GSR Part 3 in relation to the concept of exemption of practices or sources within practices from regulatory control It addresses the application of a graded approach to the concept of exemption through the use of generic exemption and specific exemption It explains the concept of exclusion and its relationship to exemption and clearance The recommendations provided in this publication are applicable to all facilities and activities that use manufacture process trade or store radioactive sources or material containing either natural or artificial radionuclides The Safety Guide primarily addresses exemption from regulatory control in planned exposure situations Although the concept of exemption is only applicable to planned exposure situations guidance on the application of a screening approach for decision making in managing certain existing exposure situations is also provided Engineering Data on Mixing Reiji Reiji Mezaki,Masafumi Masafumi Mochizuki,Kohei Ogawa,1999-11-19 This book is a compilation of the engineering data on mixing which have appeared in the major technical journals of chemical engineering and bioengineering since 1975 That year marked the beginning of a period of rapid advancement in the science and technology of mixing with rather reliable results for both theoretical and experimental studies In addition some important earlier articles which have been and still are being referred to are included Designs of both agitators and tanks still depend primarily on art and experience In light of this it was felt that the data on mixing should be compiled and presented in a systematic manner to assist in design and analysis of agitated tanks and to provide easier access to mixing data for various engineering activities Although computer aided searches of pertinent data bases can be of assistance to chemical engineers and bioengineers in their studies they are sometimes time consuming and often costly Furthermore inadequate selection of key words can jeopardize the searches This book offers an alternative method of surveying mixing data which interests readers The first chapter presents a variety of results for the experimental measurements of flow patterns in stirred tanks Most of the measurements were made by using modern Laser Doppler techniques This chapter is useful for the prediction of flow patterns in tanks with many different geometries various types of agitators and fluids of diverse physical and rheological properties plus valuable data for the validation of results obtained by CFD simulations Chapters 2 through 5 deal with data for traditional chemical engineering subjects and Chapter 6 summarizes a number of scale up relations developed over the years for various systems These include liquid solid liquid liquid liquid gas liquid and solid liquid gas systems Chapter 7 provides data related to multiphase processes and most importantly drop size and drop size distributions and bubble size distributions These two subjects have not been treated systematically either in text books or in handbooks on stirred tank mixing although the results of both experimental and theoretical investigations have been reported on many occasions Finally gas inducing mechanically agitated systems are

dealt with The applications of this type of agitation system will become increasingly attractive from the standpoint of rationalization of stirred tank operations as well as environmental protection
