Ronald E. Mickens

Advanced Function And Modeling Math Wiki:

Mathematical Modelling with Differential Equations Ronald E. Mickens, 2022-05-23 Mathematical Modelling with Differential Equations aims to introduce various strategies for modelling systems using differential equations. Some of these methodologies are elementary and quite direct to comprehend and apply while others are complex in nature and require thoughtful deep contemplation. Many topics discussed in the chapter do not appear in any of the standard textbooks and this provides users an opportunity to consider a more general set of interesting systems that can be modelled. For example, the book investigates the evolution of a toy universe, discusses why alternate futures exist in classical physics, constructs approximate solutions to the famous Thomas Fermi equation using only algebra and elementary calculus, and examines the importance of truly nonlinear and oscillating systems. Features: Introduces, defines, and illustrates the concept of dynamic consistency as the foundation of modelling. Can be used as the basis of an upper level undergraduate course on general procedures for mathematical modelling using differential equations. Discusses the issue of dimensional analysis and continually demonstrates its value for both the construction and analysis of mathematical modelling. **Intelligent Computer Mathematics** James H. Davenport, William M. Farmer, Florian Rabe, Josef Urban, 2011-07-18 This book constitutes the joint refereed proceedings of three international events: namely the 18th Symposium on the Integration of Symbolic Computation and Mechanized Reasoning (Calculemus 2011), the 10th International Conference on Mathematical Knowledge Management (MKM 2011), and a new track on Systems and Projects descriptions that span both the Calculemus and MKM topics, all held in Bertinoro, Italy, in July 2011. All 51 submissions passed through a rigorous review process. A total of 15 papers were submitted to Calculemus, of which 9 were accepted. Systems and Projects track 2011: there have been 12 papers selected out of 14 submissions, while MKM 2011 received 22 submissions, of which 9 were accepted for presentation and publication. The events focused on the use of AI techniques within symbolic computation and the application of symbolic computation to AI problem solving, the combination of computer algebra systems and automated deduction systems, and mathematical knowledge management, respectively. Asymptotic Methods for Engineers Igor V. Andrianov, Jan Awrejcewicz, 2024-05-16 Asymptotic Methods for Engineers is based on the authors' many years of practical experience in the application of asymptotic methods to solve engineering problems. This book is devoted to modern asymptotic methods (AM), which is widely used in engineering, applied sciences, physics, and applied mathematics. Avoiding complex formal calculations and justifications, the book's main goal is to describe the main ideas and algorithms. Moreover, not only is there a presentation of the main AM, but there is also a focus on demonstrating their unity and inseparable connection with the methods of summation and asymptotic interpolation. The book will be useful for students and researchers from applied mathematics and physics, and of interest to doctoral and graduate students, university and industry professors from various branches of engineering: mechanical, civil, electro-mechanical, etc. **Handbook of Global Education Policy** Karen Mundy, Andy
