Assessment Questions

ASS-1

For the equity section of a balance sheet, describe the differences between how a corporation and a sole proprietorship would present the information.

Corporations use shareholders' equity instead of owner's equity to present the equity section of the balance sheet. Corporations present a capital share segment to show the equity raised from different types of shares. Corporations also present retained earnings as the cumulative income of the business. Proprietorships only show the capital account, which include both owner investment and cumulative net income.

ASS-2

Describe the three primary differences between common shares and preferred shares.

Common shares implies that ownership is granted in proportion to the number of common shares owned whereas preferred shares have no ownership representation. One common share represents one vote for voting rights, whereas preferred shares have no voting rights. Preferred shares have a higher claim on assets and dividends than common shares.

ASS-3

On an income statement, what is a gain and how does a gain occur?

A gain is an increase in the value of a long-term asset. It can occur if the value of an investment changes or if equipment is sold.

ASS-4

Describe horizontal analysis.

Horizontal analysis compares information from one period to another. It is done by comparing individual line items from one year to the next.
