Iterated Integrals And Homotopy Periods:

Iterated Integrals and Homotopy Periods Richard Martin Hain, 1984 *Collected Papers of K.T. Chen* Kuo-Tsai Chen, Philippe Tondeur, 2001-06-21 Kuo Tsai Chen 1923 1987 is best known to the mathematics community for his work on iterated integrals and power series connections in conjunction with his research on the cohomology of loop spaces His work is intimately related to the theory of minimal models as developed by Dennis Sullivan whose own work was in part inspired by the research of Chen An outstanding and original mathematician Chen s work falls naturally into three periods his early work on group theory and links in the three sphere his subsequent work on formal differential equations which gradually developed into his most powerful and important work and his work on iterated integrals and homotopy theory which occupied him for the last twenty years of his life The goal of Chen s iterated integrals program which is a de Rham theory for path spaces was to study the interaction of topology and analysis through path integration The present volume is a comprehensive collection of Chen s mathematical publications preceded by an article The Life and Work of Kuo Tsai Chen placing his work and research interests into their proper context and demonstrating the power and scope of his influence

Contemporary Trends in Algebraic Geometry and Algebraic Topology Shiing-Shen Chern, 2002 The Wei Liang Chow and Kuo Tsai Chen Memorial Conference was proposed and held by Prof S S Chern in Nankai Institute of Mathematics It was devoted to memorializing those two outstanding and original Chinese mathematicians who had made significant contributions to algebraic geometry and algebraic topology respectively It also provided a forum for leading mathematicians to expound and discuss their views on new ideas in these fields as well as trends in 21st Century mathematics About 100 mathematicians participated in the conference including Sir Michael Atiyah Jacob Palis Phillip Griffiths David Eisenbud Philippe Tondeur Yujiro Kawamata Tian Gang etc This invaluable volume contains the selected papers presented at the conference The topics include canonical maps of Gorenstein 3 folds fundamental groups of algebraic curves Chen s iterated integrals algebraic fiber spaces and others Bimonoids for Hyperplane Arrangements Marcelo Aguiar, Swapneel

Mahajan, 2020-03-19 The goal of this monograph is to develop Hopf theory in a new setting which features centrally a real hyperplane arrangement The new theory is parallel to the classical theory of connected Hopf algebras and relates to it when specialized to the braid arrangement Joyal s theory of combinatorial species ideas from Tits theory of buildings and Rota s work on incidence algebras inspire and find a common expression in this theory The authors introduce notions of monoid comonoid bimonoid and Lie monoid relative to a fixed hyperplane arrangement They also construct universal bimonoids by using generalizations of the classical notions of shuffle and quasishuffle and establish the Borel Hopf Poincar Birkhoff Witt and Cartier Milnor Moore theorems in this setting This monograph opens a vast new area of research It will be of interest to students and researchers working in the areas of hyperplane arrangements semigroup theory Hopf algebras algebraic Lie theory operads and category theory **A Topological Chern-Weil Theory** Anthony Valiant Phillips, David A. Stone, 1993

We examine the general problem of computing characteristic invariants of principal bundles whose structural group G is a topological group. Under the hypothesis that G has real cohomology finitely generated as an R -module we are able to give a completely topological local method for computing representative cocycles for real characteristic classes; our method applies for example to the homologically 10-dimensional non-Lie group of Hilton-Roitberg-Stasheff.

Algebraic Models in Geometry Yves Félix, John Oprea, Daniel Tanré, 2008. A text aimed at both geometers needing the tools of rational homotopy theory to understand and discover new results concerning various geometric subjects and topologists who require greater breadth of knowledge about geometric applications of the algebra of homotopy theory.
