Howard, Stewart H. Berlocher,1998 Speciation is one of the great themes of evolutionary biology It is the process through which new species are born and diversity is generated Yet for many years our understanding of the process consisted of little more than a perception that if populations are isolated geographically they will diverge genetically and may come to form new species This situation began to change in the 1960s as an increasing number of biologists challenged the exclusivity of allopatric speciation and began to probe more deeply into the actual process by which divergence occurs and reproductive isolation is acquired This focus on process led to many new insights but numerous questions remain and speciation is now one of the most dynamic areas of research in modern evolutionary biology This volume presents the newest research findings on speciation bringing readers up to date on species concepts modes of speciation and the nature of reproductive barriers It also discusses the forces that drive divergence of populations the genetic control of reproductive isolation and the role played by hybrid zones and hybridization in speciation **Subject Guide to Books in Print** ,2001 [5 Steps to a 5 on the Advanced Placement Examinations](#) Mark Anestis,2001-12 A review and study guide for advanced placement study in biology
